

Re: MLA/2015/00334/10 - Cefas advice required on dredge/disposal variation in the Tees

Afternoon Adam,

I've gone through this application and the advice provided and data collected to support applications throughout this licence. I can confirm that Cefas is content that this application be treated as a non-material change, and thus, no additional evidence/assessment is required with respect to my remit.

Don't hesitate if you have any questions.

Subject: MLA/2015/00334/10 - Cefas advice required on dredge/disposal variation in the Tees

Good afternoon Joe.

Thanks for your time last week. For info. the below/attached is the variation request on MLA/2015/00334/10. In short it is to correct previous errors and/or oversights, particularly the imbalance between dredge and disposal quantities.

The attached Excel sheet supplied by Richard Cram (MLA Volumes REV D) is correct. I've created the attached Excel sheet to identify where changes and errors have been made when the ML has been varied. The last columns in the green box are correct.

One disposal figure in the Word document is incorrect, however this has been identified.

As discussed, can you please review and confirm whether you have any concerns with the proposed changes.

If easier, I can talk you through the changes.

Regards

Adam Tillotson
