

I refer to the Application R2020/0318/FFM Land at the Prairie Site Grangetown

The Local Highway Authority have no objection in principle to this application.

However, within the information provided there is no indication of what traffic is likely to be generated in relation the activities that are to be carried out (i.e. the removal of the railway embankment and the treatment of the contaminated land) There is also no indication of the haul route and accesses to be used.

In order to assess its impact on the highway network it would be helpful for this further information to be provided.

Regards

Steve Plumpton
