SECURITY FENCING

Security Mesh Fencing from Zaun features a wide range of products that have been specifically designed and manufactured to mitigate the threats of today's world. Each fencing system has features that prevent and delay would-be trespassers, terrorists, vandals and other miscreants from gaining access to sites.

Each security mesh fencing system is manufactured to mitigate threats to a site, depending on the toolset and the delay required on-site to mitigate the threat. Our most popular fences have been independently tested and approved by the leading test houses in the industry, including CPNI for the site of Critical National Importance (CNI) and BRE to LPS1175 Issue 8 for A1 (SR1), B3 (SR2), C5 (SR3) & D10 (SR10) fences. Each tested to defeat a set toolkit and achieve a time delay.

Zaun high-security mesh fencing has been used extensively all over the world to protect important sites. From Kuwait oil fields, Caribbean prisons and Canadian mental health units.

Zaun's perimeter security fencing systems range is designed, developed, and manufactured in our purpose-built factories in Wolverhampton in the West Midlands.

01. ARMAWEAVE® CPNI APPROVED FENCING

02. HISEC SUPER 6 CPNI APPROVED FENCING
