UXO Risk Assessment

1 Introduction

1.1 Appointment

Arcadis Consulting (UK) Limited (Arcadis) has been commissioned to complete a Phase 1 Environmental Desk Study for an area of land within the Teesworks site, to the west of Warrenby, Redcar.

1.2 Objectives and Scope of Work

The aim of this Phase 1 Environmental Assessment is to provide information on potential development constraints prior to carrying out enabling works. This will be used to assess potential environmental risks which may be associated with redevelopment of the site.

To achieve this, the following scope will be carried out.:

- Review relevant information provided by the client,
- Obtain and review environmental database information (Groundsure Report).
- Review of publicly available environmental information.
- Review of relevant planning documents for the site.
- Review of historical Ordnance Survey maps,
- Review of British Geological Survey maps and plans.
- Obtain and review Coal Authority data.
- A site walkover to assess current site conditions and potential areas for concern; and
- Development of a conceptual site model (CSM) in line with UK regulatory information.

It is anticipated this report will be submitted to support the planning application for the site.

1.3 Proposed Redevelopment

The area comprises disused land associated within a former steelworks site. The client is carrying out enabling works including engineering operations and remediation to form a development platform for a subsequent generic commercial / industrial end use. It is anticipated that these works will involve excavation of soils to remove obstructions, unsuitable materials or contaminated soils which will be processed or remediated as necessary and placed as engineering fill.

The client has submitted a planning application to Redcar and Cleveland Council for the enabling works (ref R/2021/1048/FFM). At the time of writing, the application is yet to be decided.

For clarity, the future development of the site will be subject to a separate consenting process (anticipated to be a Development Consent Order) at a later date and is therefore not considered in this report.

1.4 Reliability of Information / Limitations

Arcadis warrants that the services performed were conducted in a competent and professional manner in accordance with sound consulting practices and procedures.

Arcadis cannot warrant the actual property conditions described in this report beyond matters amenable to confirm within the limits of this report.

The reader is referred to the Study Limitations, presented in Appendix A

1.5 Sources of Information

The following sources of information have been used in compiling this report:

- Groundsure Report (Appendix C);
- Historical Ordnance Survey Maps (Appendix D);
- Site Walkover and Photo Log (Appendix E);

10035117-AUK-XX-XX-RP-ZZ-0520-01-Land West of Warrenby Redcar Preliminary Risk Assessment

- British Geological Survey (BGS) published maps and online GeoIndex borehole records;
- Redcar and Cleveland Borough Council Planning Portal;
- DCO application;;
- Unexploded Ordnance (UXO) Screening assessment (Appendix F);
- Coal Authority Website; and,
- Gov.uk website.

2 Site Setting

2.1 Site location

The site is located within the Teesworks site, off Trunk Road, Redcar TS10 5QW at national grid reference 457141, 525496. The site covers an area of 62.30 hectares and is an area of former industrial land which forms part of a wider steelworks complex.

The current site layout plan is presented below and in Appendix B.

Figure 1 - Site Plan

2.2 Site Description

A site reconnaissance was undertaken by Arcadis in April 2022. The resulting data (site notes and photos) have been used in parts of this report, where necessary, to supplement and support desk-based information. Access to certain areas of the site was not possible at the time of the visit due to ongoing demolition works, and the inspection was limited to external areas only. The site reconnaissance photos are presented in Appendix E.

The site is roughly rectangular in area and generally level at 7.5 to 7.1m AOD, with a notable exception being the low lying ponds area in the north east where levels are as low as 4.5m AOD.

The southernmost part of the site is occupied by the Redcar Sinter Plant (currently undergoing demolition) and associated raw materials handling facility which includes a number of above ground conveyors, tunnels, and level material laydown/storage areas. The sinter plant was used to combine the basic raw materials for iron making (iron ore, limestone and coke) into pellets which were transferred directly to the blast furnace (outside of the site boundary) to produce iron.

The central area of the site includes large level grassed areas (locally with evidence of hardstanding), the Teesside Management Offices (TMO) and pellet tunnel building, a maintenance building with an above ground diesel tank, car parking and estate roads. Both the TMO and pellet tunnel building are of masonry construction and show signs of ground movement (possibly associated with slag expansion). The diesel tank is understood to have held up to 200 tonnes of fuel. This has been partially, but not fully drained. The tank is housed in a concrete bund which shows no significant staining.

Until recently this area of the site was crossed by a number of above ground conveyors which transferred sinter to the blast furnace and heavy fuel oil and coke oven gas main which ran on overhead gantries. All of these structures have now been demolished or are in the process of removal.

The northern area of the site includes the Blast Furnace Stockhouse (largely demolished), and until recently the RDL stores and canteen (now fully demolished). These are surrounded by large level areas of grass, which locally include evidence of earlier development (concrete foundations). It is also understood a number of shallow brick lined tunnels cross this area of the site with the crown of the tunnel as shallow as 0.5m below ground level. In the northeastern area of the site levels are noted to drop to 4.5m AOD and the topography is notably uneven with areas of fused slag and slag boulders visible.

The northern area of the site is crossed by estate roads, and a number of rail sidings and the hot metal track which previously transferred molten iron from the blast furnace (west of site) to the BOS plant at Lackenby.

The area surrounding the site is summarised below:

- North Teesworks boundary fence with unnamed road, areas of slag, dunes and ponds beyond.
- East Estate road with Teesworks' Long Acres development plot beyond
- South Estate road with Teesworks' Foundry development plot beyond
- West Foundry Development plot including Redcar Blast Furnace complex to northwest,

2.2.1 Potential Areas of Concern

Extensive made ground is anticipated to be present across the site which is anticipated to comprise large amounts of iron and steel making by products (principally slag).

The former heavy industrial usage of the site has included storage of large volumes of raw materials (iron, limestone and coal), pipelines and conveyors for transferring these products and localised storage of fuel.

At the time of writing demolition works are ongoing to several large industrial structures on the site. Given the age of these structures, it is acknowledged that harmful materials may be present within the structures such as asbestos containing materials, hydrocarbons or PCBs in electrical equipment etc., however works are being carried out in a controlled manner and it is anticipated that the current demolition operations do not pose a significant risk of spreading or contaminating soil and groundwater with these materials.

No further significant areas of concern were observed during the site reconnaissance.

3 Site History

Based on the Groundsure report (presented in Appendix B) and the historical maps (presented in Appendix C) the site history is summarised below:

3.1 On-Site History

Table 1 - On-Site History

Year	Details	Potential Sources of Contamination
1857	Much of the site is within the Tees Estuary and is recorded as Bran Sands. A small promontory recorded as Todd Point encroaches into the eastern area of the site.	No significant sources of contamination are identified other than potential for ground gases if peat present in marsh/tidal deposits.
1893	Works to reclaim the area have commenced with South Gare Breakwater crossing the site from southeast to northwest. A tramway is recorded as running parallel to the breakwater. The northern area of the site includes marshland and ponds Sea walls have been constructed along the western site boundary, much of the southwest of the site is recorded as sand. An iron works has been constructed at Todd Point which extends partially onto site.	Depends on nature of material used for reclamation works. Assumed to include iron or steel slag therefore contaminants will include heavy metals/metalloids, sulphates, phosphates, cyanide. Asbestos associated with rail infrastructure.
1913	The iron works is recorded as Coatham Iron works and has extended slightly. Associated slag wool works and a tar macadam works have been constructed east of the site. A tramway has been constructed crossing the north of the site and extending to the northwest where further land reclamation is ongoing. The northern area of the site includes a rifle range.	Those above plus tar, bitumen and PAH associated with macadam works.
1927	The Iron works has extended considerably and is now recorded as the Redcar Iron and Steel Works and occupies much of the northern area of the site. Two additional areas in the north are recorded as slag and tar macadam works. The southern area of the site is recorded as areas of marsh and pond and is named The Marshes.	Those above, plus fuels and oils associated with casting, tars, PAH phenol, thiocyanate and ammoniacal nitrogen associated with coke making (if present). Asbestos (structures and demolition). PCBs (electrical equipment)
1938-1953	No significant changes. Small area recorded as "Refuse Tip" to the south of the main building. Further reclamation works and industrial development on surrounding areas.	Similar to those outlined in 1927

10035117-AUK-XX-XX-RP-ZZ-0520-01-Land West of Warrenby Redcar Preliminary Risk Assessment

Year	Details	Potential Sources of Contamination
1969	The Iron and steel works has extended. Drains have been installed in The Marshes area. Further land reclamation on areas surrounding the site.	Similar to those outlined in 1927
1974-1976	Mapping incomplete. Much of the southern area of site has been reclaimed	Similar to those outlined in 1927.
1981	By 1981 the site layout has changed significantly. The 1920's structures are no longer present and the site resembles the current layout with materials handling, sinter plant and pellet plant in the south and conveyors for transferring sinter north to the blast furnace stockhouse and off site blast furnace complex. The site is served by estate roads and rail infrastructure	Coal or coke breeze in material stocking areas. TPH associated with above ground tanks and pipelines. Asbestos (structures and demolition). PCBs (electrical equipment)*
1981-2015	The site remained operational between 1981 and 2015. The site remained relatively unchanged other than demolition of the pellet plant in the early 2000's.	Coal/coke breeze from material handling and pellet plants. Demolition material-pellet plant.
2015-present	In September 2015 the site went into administration and was mothballed	None

* PCBs typically sorb to soil and are not highly mobile. These contaminants may act as localised point sources beneath existing electrical infrastructure (substations, switchgear etc.).

3.2 Surrounding Area History

Table 2 - Surrounding Area History

Year	Details	Potential Sources of Contamination
1857	Undeveloped land to east. A watercourse (later labelled as The Fleet) is present approximately 400m S-SE of the site. Tidal areas of the Tees estuary to the north, south and west.	None identified. Potential for ground gases if peat present in tidal/marshland areas.
1893	Two iron works, railway sidings, Darlington to Saltburn railway constructed to the east. Several ponds and reservoirs are recorded to the north, east and south of the site. Construction has started on the South Gare Breakwater which extends to the northwest of the site as have further land reclamation works west of the site. These are accessed by tramways which cross the site onto the adjoining areas.	Heavy metals, inorganic contaminants (sulphate, phosphate), acids, alkalis, asbestos.

10035117-AUK-XX-XX-RP-ZZ-0520-01-Land West of Warrenby Redcar Preliminary Risk Assessment

Year	Details	Potential Sources of Contamination
	A sea wall has been constructed to the south of the site to enclose an area which is recorded as marshland.	
1913	Further industrial expansion to the east of the site including tar macadam works and slag wool works immediately east, with Redcar Iron works, slag wool works and slag brick works beyond. Further land reclamation activities to the northwest.	Those above plus TPH, PAH and phenols associated with macadam works.
1927	Extension of the ironworks in the east (which now extend onto site) including additional rail sidings. With further works buildings to the west of site. Further reclamation to the north and west, including a pumping station on the site boundary.	Potential additional contaminants associated with coke making including phenols, thiocyanate, cyanide. Fuels and oils associated with casting.
1938-1953	The ponds and reservoirs have been largely infilled/built over other than those to the south which are recorded as "mud and sand". No other notable changes other than further land reclamation to the north and west.	Depends on materials used for filling and reclamation, but assumed to be iron and steel making by-products, principally slag.
1974	Significant changes including removal of structures to the south and west of the site and areas recorded as "active workings" Warrenby station is recorded on rail track immediately east of the site.	As above
1980	By 1980 extensive land reclamation has been completed to the south, west and north of the site and the Redcar Blast furnace and Redcar Coke Oven complexes have been constructed to the northwest. . Areas to the west and south are occupied by conveyors and rail sidings associated with material storage. Warrenby Station has been demolished and the associated tracks are recorded as "dismantled railway".	As above plus ammoniacal nitrogen, phenols, thiocyanate (Blast furnace and Coke ovens complex)
2015-present	All plant surrounding the site was mothballed in 2015 and has been under the maintenance of STSC	No additional contaminants

In summary the site has undergone two significant phases of redevelopment with reclamation of the site from the Tees estuary in the early 20th Century and subsequent development of the Redcar Iron and Steel works. In the 1960's and 1970's further reclamation works were carried out around the site and the site was developed into the current layout as part of the integrated steelworks complex, following demolition of the earlier 20th Century buildings.

3.3 Regulatory Information

3.3.1 Environmental Permits, consents, and authorisations

The following details of environmental permits, consents, and authorisations within a 500m radius of the Site, have been obtained from the Groundsure Report (Appendix B).

Table 3 - Environmental Permits, Consents and Authorisations On-Site

	Within 500m	Distance and direction of nearest/ most significant	Details
<i>Part (A1) Environmental Permits</i>	1	88m W	Permit for screening coal. Last recorded as active 1/10/2004
<i>Part A(2) and B Permits</i>	0	-	-
<i>Discharge Consents</i>	0	-	-
<i>Dangerous or Hazardous Sites</i>	0	-	-
<i>Recorded pollution incidents</i>	2	0	24/9/2001 On site Waste materials - Tyres Land Impact Category 3 (Minor)
		445m W	3/10/2009 Atmospheric Pollutants and Effects-Dust Land Impact - Category 3 (Minor) Air Impact - Category 2 (Significant)
<i>Active Landfills</i>	3	300m E	Site reference: EA/EPR/KP3790ZE/V002 Waste type: Household, Commercial, Industrial Operator: TATA Steel UK Ltd Licence holder: TATA Steel UK Ltd First recorded: - Last recorded: - Status: Closure
<i>Historic Landfills</i>	2	90m W	Site reference: 0700/CLE/087 Waste type: Inert, Industrial Operator: - Licence holder: British Steel Plc Licence issue: 11/12/1979 Licence Surrender: 13/04/1997

10035117-AUK-XX-XX-RP-ZZ-0520-01-Land West of Warrenby Redcar Preliminary Risk Assessment

<i>Historical Industrial Sites</i>	47	On Site	Groundsure records 47 former industrial uses on the site including iron & steel works, works buildings and above ground tanks.
<i>Historical Tanks</i>	34	On site	34 Unspecified Tanks recorded on site through historic mapping.
<i>Historical Energy Features</i>	4	On Site	Four Electricity Substations recorded on site.
<i>Ground Abstraction Water</i>	0	-	-
<i>Surface Abstraction Water</i>	0	-	-
<i>Environmentally Sensitive Sites</i>	3	0m North-	Teesmouth and Cleveland coast adjoins site immediately north-and is classified as: • SSSI • Special Protection Area • Proposed RAMSAR site

3.4 Planning Consents

It is understood that consent has been sought for a future commercial development of the site for a carbon capture and storage facility at the site. It is understood that this is classed as a Nationally Significant Infrastructure Project and permission is being sought for the project under a Development Consent Order (DCO) process.

For clarity this report has been prepared to inform the construction of an enabling works platform for the site and does not consider the DCO.

4 Environmental Setting

4.1 Geology, Hydrogeology and Hydrology

4.1.1 Published Geology

The geology of the site was confirmed by reviewing published geological maps for the area-Sheet 34, Guisborough, 1:50,000 scale and digital 1:10,000 scale mapping. It should be noted that Sheet 34 has been issued as a Provisional Series map.

These sources record extensive made ground across the site footprint- this is consistent with the reclamation of the site from the Tees Estuary and the extensive industrial usage of the site.

Superficial deposits underlying the made ground are recorded as Tidal Flat Deposits (TFD)- likely to include layers of clay, silt and sand, and in the east wind blown sand. These in turn are anticipated to be underlain by glaciolacustrine deposits (GL) - a laminated clay with silt partings, and glacial till (GT) - firm or stiff pebbly clay, locally with lenses of gravel. It should be noted that the geological mapping suggests that neither the glacial till, nor the glaciolacustrine deposits are exposed at surface within the site footprint.

Superficial Geology

Bedrock geology beneath the site is recorded to include the Redcar Mudstone (mudstone with thin sandstones and limestones) across much of the site, with the Penarth Group (mudstone with sandstones) and Mercia Mudstone Group (mudstone with gypsum and sandstone) present beneath the northwest of the site. The Sherwood Sandstone lies unconformably beneath the Mercia Mudstone and will be present at depth beneath the site.

These strata are anticipated to dip to the southeast, however the actual dip may be affected by faulting.

Table 4 – Geology On-Site

	Rock Type	Brief Description	Anticipated Thickness	Anticipated Depth
<i>Bedrock Geology</i>	Redcar Mudstone	Grey, fossiliferous, fissile mudstones and siltstones	0 - >50m	10m (absent in northwest of site)
	Penarth Group	Grey to black mudstones with subordinate limestones and sandstones	10-15m	10m northwest corner of site increases towards the southeast
	Mercia Mudstone	Red and green mudstone with gypsum	230-275m	20m in northwest of site increasing to the southeast
	Sherwood Sandstone	Sandstone, red, yellow and brown	250+m	>250m at shallowest point

The approximate distribution of rocks beneath the site are recorded on the generalised vertical section and cross section provided on BGS Sheet 34 Guisborough.

4.1.2 Borehole Records

No boreholes within the site boundary are available to view on the BGS historic borehole database, however several are available within close proximity to the site. A brief summary of the ground conditions encountered is provided below

Table 5 – BGS Borehole Archive

(https://mapapps2.bgs.ac.uk/geoindex/home.html?_ga=2.156903227.1285241052.1649924275-945219663.1649924275)

BH ID	Made Ground	Superficial Deposits	Bedrock
<i>NZ52SE51</i> <i>89m S of site</i>	5.16 to 0.66mAOD (4.5m) Gravel to boulder sized SLAG	0.66 to-2.6m AOD Silt and fine SAND with shells (TFD) -2.64 to -4.54m AOD soft to firm CLAY (?TFD) -4.54 to -7.04m AOD Firm to stiff gravelly CLAY (GT)	-7.04 to -23.04 mAOD (16m). Dark Grey calcareous MUDSTONE with shelly bands (RMF)
<i>NZ5NSE51</i> <i>164m W of site</i>	7.22 to 2.92mAOD (4.3m) Sand to cobble sized SLAG	2.92 to-4.98m AOD fine to medium SAND with shells (TFD) -4.98 to -7.98m AOD Stiff brown gravelly CLAY (GT)	-7.98 to -37.88 mAOD (29.9m). Red brown very weak MUDSTONE (MMG)

Full details of the geology encountered and additional borehole records can be found at the link included in Appendix B (pg114).

4.2 Hydrogeology

Table 6 – Aquifer Designations (<https://magic.defra.gov.uk/>)

	Rock Type	Aquifer Designation	Aquifer Description
<i>Made ground</i>	Expected across much of the site footprint	-	-
<i>Superficial Geology</i>	Wind Blown Sand (East of site only)	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers -
	Tidal Flat Deposits	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers -
	Glaciolacustrine Deposits	Unproductive Strata	Rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.
	Glacial Till	Secondary Undifferentiated Aquifer	Secondary undifferentiated are aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type. These have only a minor value
<i>Bedrock Geology</i>	Redcar Mudstone	Secondary Undifferentiated Aquifer	Secondary undifferentiated are aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type. These have only limited resource value.
	Penarth Group	Secondary Undifferentiated Aquifer	Secondary undifferentiated are aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type. These have only limited resource value.
	Mercia Mudstone	Secondary B Aquifer	Predominantly lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering.
	Sherwood Sandstone	Principal Aquifer	Layers of rock / drift deposits that have high intergranular flow and/or fracture permeability (usually provide a high level of water storage). They may support water supply and/or river base flow on a strategic scale.

Note- the superficial deposit aquifer designations differ between those recorded in the Groundsure database and those available on <https://magic.defra.gov.uk/MagicMap.aspx>.

4.2.1 Source protection zones

The site is not located with a Groundwater Source Protection Zone (SPZ).

4.2.2 Abstraction Licenses

There are no groundwater abstraction licenses on the site or within 500m.

4.3 Hydrology

4.3.1 Surface water resources

There are no surface water features on site

The nearest river is the Fleet which is approximately 150m southeast of the site at its nearest point.

A number of ponds are present to the north of the site. Anecdotal evidence suggests that these may have been partially or wholly fed by quenching water associated with the Redcar Blast Furnace complex. It is further understood that these ponds have been shrinking since works stopped on site in 2015.

Ordnance Survey mapping records two further ponds approximately 150m south of the site, and a third pond 150m west.

The North Sea is located approximately 750m north of the site at its closest point.

4.3.2 Abstraction Licenses

There are no surface water abstractions on the site or within 500m.

4.4 Flooding Risk

The risk of flooding from Rivers and the sea is recorded as very low (less than 1 in 1000 chance in any given year) (source <https://check-long-term-flood-risk.service.gov.uk/map?easting=457680.93&northing=524125.95&map=RiversOrSea>).

4.5 Radon Affected Areas

The site is recorded in an area where radon levels are between 1% and 3%, which requires basic radon protection measures in new buildings. This is not considered significant for the proposed enabling works, but will need to be considered further for any proposed development of the site.

4.6 Unexploded Ordnance

A detailed UXO Threat and Risk Assessment prepared by 6Alpha Limited (presented in Appendix F) indicates the site is in an area of High UXO risk. Specific precautions are required for ground investigation or engineering works (e.g. excavation, piling etc.) which are carried out on site.

4.7 Mining

4.7.1 Coal Mining

A review of the Coal Authority interactive map viewer (<https://mapapps2.bgs.ac.uk/coalauthority/home.html>) indicates the site is not within a development high risk area or areas of known coal mining activity.

4.7.2 Non coal mining

4.7.2.1 Brine extraction

The site is recorded in an area which has historically been subject to brine extraction with the main areas located at Saltholme north of the Tees and South Bank and Middlesbrough to the west of the site. The main halite bearing strata targeted by the brine abstraction is the Boulby Halite member. This is believed to be at approximately 550m beneath the site. Given the depth, this is unlikely to affect environmental conditions at the site, the geotechnical/engineering implications for development of the site are outside of the scope of this report.

4.7.2.2 Ironstone Mining

Ironstone mining is widespread in the Cleveland area, with mining restricted to the area south of the outcrop of the Main Seam (ironstone). Records held by the British Geological Survey (https://largeimages.bgs.ac.uk/iip/mineplans.html?id=011625_01) indicate that all workings are at least 5km south of the site and will therefore not affect the proposed enabling works.

5 Site Specific Geology

The site has been subject to several phases of ground investigation in the past. Several of these investigations cover wider areas than the subject area of this report, a brief summary of the works carried out within the current site boundary is provided below.

Table 8 Historic Ground Investigation Summary

Investigation	Date	Scope	Analysis
Enviros Soil and Groundwater Baseline Characterisation Study, Teesside Works	2004	3 Boreholes (max 8m) 25 Trial Pits (max 5.70m)	Soil & Water- pH, Heavy Metals, Cyanide, Sulphate, TPH, GRO,BTEX, Phenols, PAH

CH2M -Summary Former SSI Steelworks- Initial GI - Geoenvironmental Summary	2018	Interpretative report based on CH2M-SSI1 & SSI2.	N/A
AEG -4153&4154 The Former SSI Steelworks, Redcar-GI Contract -Priority Areas Within SSI Landholdings Contract 1 and Contract 2 (Area A)	2018	13 boreholes (max 40.80m) 5 trial pits (max 4.20m)	Soil Asbestos, pH, Heavy Metals, Cyanide, Thiocyanate, Sulphate, TPH, Phenols, PAH, PCB, Water pH, Heavy Metals, Cyanide, Thiocyanate, Sulphate, Chloride TPH, BTEX, Phenols, PAH, VOC, SVOC, PCB, ammoniacal nitrogen Ground Gas CO ₂ , CH ₄ , O ₂
Arcadis 2018 Redcar Steelworks-AUK-XX-XX-RP-GE-0001-02-SSI1_SSI2A_GI_SCR	2018	Interpretative assessment of the data included within AEG 4153	N/A
AEG 4339 Preliminary Onshore Ground Investigation for Net Zero Teesside.	2021	15 Boreholes (max 37.30m) 8 trial pits (max 4.50m)	Soil Asbestos, pH, Heavy Metals, Cyanide, Thiocyanate, Sulphate, TPH, Phenols, PAH, PCB, Water pH, Heavy Metals, Cyanide, Thiocyanate, Sulphate, TPH, BTEX, Phenols, PAH, VOC, SVOC, ammoniacal nitrogen Ground Gas CO ₂ , CH ₄ , O ₂

Enviros 2004

The Enviro investigation recorded ground conditions to include a layer of made ground across the entire site. This made ground was predominantly granular in nature and was dominated by slag material, however refractory products, ash and concrete were also encountered as were relict foundations, floor slabs etc. The majority of trial pits terminated within the made ground deposits. The maximum thickness of made ground was recorded as 7.00m.

Natural strata were found at a limited number of locations and were found to include Tidal Flat Deposits (typically silty sand with shells). Shallow clay variously described as soft gravelly clay or peaty clay was recorded at four locations north of the sinter plant. These were encountered at relatively shallow depth and recorded as natural soils, however, it is possible that these are in fact made ground deposits as this area is known to have been reclaimed from the Tees.

Screening of the soil chemical data recorded elevated concentrations of pH and sulphate above the screening criteria adopted, with localised exceedances for PAH, lead and zinc.

Groundwater was interpreted to be flowing to the north/northeast. Chemical analysis recorded exceedances for pH and sulphate at two of these locations, with one location also recorded elevated arsenic and another recording elevated copper and cyanide when compared to the adopted Tier 1 screening values.

CH2M 2017

The CH2M investigation included only trial pits and natural ground was not exposed at any locations. The made ground was found to consist of a mix of predominantly granular material including sand and gravel size fragments of slag with varying proportions of cobble and boulder size fragments of slag. Other materials were also located locally including tyres, conveyor belts and demolition type waste. Locally the made ground was noted to exhibit a hydrocarbon odour.

CH2M concluded that *“geoenvironmental testing of Made Ground indicates that the site is unlikely to be a significant source of leachate from heavy metals and other inorganics. Whilst the site does appear to contain contaminants capable of leaching at concentrations above the screening criteria, they are generally only minor exceedances, generally ranging from just above the screening criteria, in the case of zinc, or one to two orders of magnitude greater than the screening criteria, in the case of chromium.*

CH2M also note that asbestos may be present in made ground.

AEG 2018

Shallow ground conditions were found to be dominated by mainly granular made ground consisting of slag, concrete and refractory material, however locally cohesive made ground was also noted. Made ground was found to extend to depths of up to 9.5m below ground level.

Natural strata were found to consist of Tidal Flat Deposits typically found to consist of a silty shelly sand with rare gravel. This was typically underlain by glacial till- typically a stiff gravelly clay and locally glaciolacustrine deposits -a firm or stiff thinly laminated clay. Locally the till was absent.

Bedrock was recorded as a weak grey mudstone which is consistent with the Redcar Mudstone Formation recorded on geological maps for the area. The mudstone was proved to >40m depth in the southeast of the site.

Arcadis 2018

Arcadis carried out an interpretative review of the factual data provided in AEG 4153.

The assessment concluded that soil samples did not generally pose a risk to human health for a commercial end use, however it was noted that asbestos fibres were present in 10% of samples analysed and this could pose a short-term risk if soils were left exposed on site.

The assessment of concentrations in groundwater noted exceedances of water quality standards which were consistent with soil leaching data. It was noted that the effect on deeper groundwater within bedrock aquifers was limited, however a controlled waters risk assessment should be carried out.

AEG 4331 2021

Further ground investigation was carried out by AEG to support the DCO process. Ground conditions were consistent with those identified in previous phases of investigation and included predominantly granular slag rich made ground overlying Tidal Flat Deposits, Glaciolacustrine deposits and Glacial Till. Bedrock encountered was Redcar Mudstone and was proved to 37.30m depth.

A detailed review of the laboratory data is being carried out by Arcadis and will be reported separately.

6 Data Gaps

The sequence of ground investigation works carried out to date have provided a combined total of 233 sampling locations across the site. These provide a reasonable degree of confidence in ground conditions and chemical composition of soil and groundwater across the site. However, due to the presence of structures it has not been possible to investigate a limited number of areas including:

- Area adjoining the blast furnace complex in the north
- Blast furnace stockhouse and stores area
- Sinter plant.

Limited additional ground investigation should be carried out in these areas once demolition/clearance works have been completed.

7 Preliminary Conceptual Site Model

This section summarises the findings of this desk-based assessment and site reconnaissance in the form of a geo-environmental conceptual site model (CSM).

The CSM provides a qualitative evaluation of potentially active “pollutant linkages” at the site; these being plausible scenarios whereby a contamination source is connected to a possible receptor by one or more pathways:

- Potential sources of contamination: these include any actual or potentially contaminating materials and activities, located either on or in the vicinity of the site.
- Potential pathways for contamination migration: these comprise the routes or mechanisms by which contaminants may migrate from the source to the receptor including environmental migration pathways and human health exposure pathways; and
- Potential receptors of contamination: these include present and/or future land users, ecological systems, water resources and property.

7.1 Potential Contaminant Sources

Table 2 - Potential Contamination Sources

Source	Potential Contaminants
On Site	
Made Ground (mainly slag)	Contaminants include heavy metals, asbestos, hydrocarbons, acids, alkalis, sulphate, phosphate. Bulk gases (methane, carbon dioxide) if organic matter present.
Former industrial uses - iron and steel making plant	Asbestos, pH, Heavy Metals, Cyanide, Sulphate, TPH, BTEX, Phenols, PAH, VOC, SVOC, PCB
Macadam works	Asbestos, TPH, BTEX, Phenols, PAH, VOC, SVOC
Railways	Asbestos, hydrocarbons, ash, PAH, phenol, sulphates
Material Storage	Coal/coke breeze
Natural geology- Peat *	May give rise to bulk gases (methane, carbon dioxide) if present in superficial
Natural Geology- sulphates *	Redcar Mudstone and Mercia Mudstone group may contain elevated concentrations of sulphate associated with gypsum, pyrite etc. On weathering these may release sulphate ions which can be aggressive to concrete. Similar conditions may also exist where superficial deposits (e.g. glacial till)
Off site	
Made Ground	Contaminants include heavy metals, asbestos, hydrocarbons, acids, alkalis, sulphate, phosphate. Bulk gases (methane, carbon dioxide) if organic matter present.
RCO and blast furnace complexes	Asbestos, pH, Heavy Metals, Cyanide, Sulphate, TPH, BTEX, Phenols, PAH, VOC, SVOC, PCB, ammoniacal nitrogen

7.2 Potential Receptors

7.2.1 Human Health

The principal human health receptor will be future site users. There are no neighbouring residents, however members of the public may visit the adjoining beach/dunes to the north of the site.

The acute risk posed to redevelopment workers will be addressed by construction phase planning and health and safety management.

Other receptors may become relevant following any future development of the site.

7.2.2 Controlled Waters

Controlled waters beneath the site include a superficial Secondary A aquifer (Tidal Flat Deposits) and Secondary Undifferentiated bedrock aquifer (Redcar Mudstone).

It is also noted that Glacial Till is classed as a Secondary Undifferentiated aquifer. This classification is applied as Glacial Tills may include granular horizons which may be water bearing/permeable strata. However, significant ground investigation has been carried out on the site which has demonstrated that the Glacial Till is dominated by low permeability clay deposits and so this classification is considered overly conservative.

It is also noted that the Sherwood Sandstone Principal Aquifer is present beneath the site. However, the desk study has revealed that this aquifer is at significant depth (>250m) beneath the site and so is not considered a potential receptor at the site.

The site is not located within a groundwater source protection zone, and due to the industrial history of the area there is little/no possibility that groundwater will be abstracted for potable use.

Other potential controlled waters to be assessed at the site include the North Sea approximately 700m north of the site. While it is reported that surface water ponds to the north of the site have been receding since cessation of the use of water for quenching at the Redcar Blast Furnace, these are considered potential receptors at this time as are further ponds to the south.

7.2.3 Built Receptors

The contaminants/potential contaminants on site (in particular ground gases, sulphates and hydrocarbons) may pose a risk to built infrastructure including new buildings, subsurface concrete and water supply pipes. However, the proposed enabling works will not introduce such receptors, so these contaminants can be excluded from further assessment at this stage.

7.3 Potential Pathways

Potential pathways are the routes that link the receptor to the contamination. The potential pathways for this site are summarised in the table below.

Table 3 - Potential Contamination Pathways

Receptor	Pathway
Human Health	Direct contact pathways via which ground contaminants can migrate to human receptors by ingestion and/or absorption - Soft landscaped areas considered to have active direct contact pathway, and direct contact will be active during construction phase when sub-surface soils are exposed/excavated. Airborne pathways via which particulate and/or vaporised ground contaminants can migrate to sensitive receptors within soil (air pores), and the above ground atmosphere
Controlled Waters (Aquifer)	Aquifers are considered of low value/sensitivity due to the industrial history of the area, however potential for leaching of contaminants from soil to the aquifers is considered active.
Controlled Waters (Surface Water)	The North Sea and ponds in the vicinity of the site are considered potential receptors for site derived contaminants. Notwithstanding anecdotal evidence that the ponds are drying up, the pathway for leaching of site derived contaminants is considered active.

7.4 Preliminary Qualitative Risk Assessment

Table 4 - Preliminary Qualitative Risk Assessment

Potential Receptor	Potential Source	Potential Pathway	Comment
Future Site Users*	Made Ground	Particulate inhalation / dermal contact / ingestion	Overall risks low given the given the findings of the previous investigation. However, risks cannot be discounted.
Future Construction Workers	Made Ground Ground Gases	Particulate inhalation / dermal contact / ingestion	Overall risks low, suitable mitigation measures would need to be implemented into construction work plans.
Members of public	Made Ground	Vertical migration from on-site impacts leaching into groundwater which migrates off-site resulting in indoor/outdoor vapour inhalation	Overall risks very low given development history. Unknown depth to groundwater or nature of made ground.
Controlled Water (Aquifer)	Made Ground	Vertical migration from on-site impacts leaching into groundwater body	Overall risks low given the low sensitivity of the receptor. However, the risks cannot be discounted.

Potential Receptor	Potential Source	Potential Pathway	Comment
Controlled Water (Surface Water)	Made Ground	Vertical migration from on-site impacts leaching into groundwater body and lateral migration off site.	Overall risks low given the distance to the receptor (North Sea) and anticipated lack of lateral pathway (ponds) However, the risks cannot be discounted.

* Future Site Users are for a generic commercial / industrial use, and as such would need to be reviewed in the context of a specific development.

7.4.1 Overall Environmental Risk

Based on the information contained within this report, the overall risk to the environment is considered to be **Low**, given the limited sensitivity of the receptors and the wider industrial nature of the area.

However, as noted above, further investigation should be carried out in a limited number of areas which have not been accessible due to structures etc. and further assessment of the risk to surface water and controlled aquifers will be required.

Remedial and earthworks strategies and an construction phase environmental management plan will need to be developed to ensure any risk is not exacerbated during the enabling earthworks.

8 Conclusion

This Phase I report presents an assessment of the geo-environmental information pertaining to the site based on readily available desktop / published sources and a site reconnaissance walkover survey.

The objective of this assessment was to collate and review the available geo-environmental information to determine potential ground contamination risks associated with the site in its current condition and with regards to its future development prospects.

8.1 Geo-Environmental Risks

The likely main risks associated with the proposed demolition is potential from poor ground conditions related to the presence of made ground. The overall geotechnical risk is considered **Low** at this stage.

Based on a review of the available information, it is unlikely that historical and current land uses of the site will have generated significant contamination impacts to soil and/or groundwater. There is however potential for localised contamination to be present resulting from made ground during construction of the school building.

The preliminary risk to human health and controlled waters associated with potentially “active” Source-Pathway-Receptor linkages is generally considered to be **Low** at this stage.

Construction materials associated with the site may include materials which would be classed as hazardous waste.

8.2 Recommendations

An asbestos consultant should be engaged to carry out a refurbishment/demolition survey before any demolition works are carried out.

If external hardstanding is to be grubbed out, this should be tested to confirm its waste characterisation.

If the site is to be divested post demolition, the client may wish to carry out a limited ground investigation to inform potential purchasers of ground conditions. The overall environmental risks are considered to be low and resulting from potential made ground on site. The ground investigation should focus on understanding presence and extent of made ground on site, and the contaminants within the made ground, which would enable assessment if potential pollutant linkages do exist and recommendations for further works / mitigations as part of the redevelopment.

APPENDIX A

Arcadis Study Limitations

This section should be read before reliance is placed on any of the information, opinions, advice, recommendations, or conclusions contained in this report.

1. This report has been prepared by Arcadis (UK) Ltd (Arcadis), with the reasonable skill, care and diligence within the terms of the Appointment and with the resources and manpower agreed with the Client. Arcadis does not accept responsibility for any matters outside the agreed scope.
2. This report has been prepared for the sole benefit of the Client unless agreed otherwise in writing. The contents of this report may not be used or relied upon by any person other than this party without the express written consent and authorisation of Arcadis.
3. Unless stated otherwise, no consultations with authorities or funders or other interested third parties have been carried out. Arcadis is unable to give categorical assurance that the findings will be accepted by these third parties as such bodies may have unpublished, more stringent objectives. Further work may be required by these parties.
4. All work carried out in preparing this report has used, and is based on, Arcadis' professional knowledge and understanding of current relevant legislation. Changes in legislation or regulatory guidance may cause the opinion or advice contained in this report to become inappropriate or incorrect. In giving opinions and advice, pending changes in legislation, of which Arcadis is aware, have been considered. Following delivery of the report, Arcadis has no obligation to advise the Client or any other party of such changes or their repercussions.
5. This report is only valid when used in its entirety. Any information or advice included in the report should not be relied upon until considered in the context of the whole report.
6. Whilst this report and the opinions made are correct to the best of Arcadis' belief, Arcadis cannot guarantee the accuracy or completeness of any information provided by third parties. Arcadis has taken reasonable steps to ensure that the information sources used for this investigation provided accurate information and has therefore assumed this to be the case.
7. This report has been prepared based on the information reasonably available during the project programme. All information relevant to the scope may not have been received.
8. This report refers, within the limitations stated, to the condition of the Site at the time of the inspections. No warranty is given as to the possibility of changes in the condition of the Site since the time of the assessment.
9. The content of this report represents the professional opinion of experienced environmental consultants. Arcadis does not provide specialist legal or other professional advice. The advice of other professionals may be required.
10. Unless otherwise stated the report provides no comment on the nature of building materials, operational integrity of the facility or on any regulatory compliance issues.
11. Unless otherwise stated, an inspection of the Site has not been undertaken and there may be conditions present at the Site which have not been identified within the scope of this assessment.
12. Unless otherwise stated, samples from the Site (soil, groundwater, building fabric or other samples) have not been obtained.
13. Arcadis has relied upon the accuracy of documents, oral information and other material and information provided by the Client and others, and Arcadis assumes no liability for the accuracy of such data, although in the event of apparent conflicts in information, Arcadis would highlight this and seek to resolve.
14. Unless otherwise stated, the scope of works has not included an environmental compliance review, health and safety compliance review, hazardous building materials assessment, Interviews or contacting Local Authority, requests for information to the petroleum officer, sampling or analyses of soil, ground water, surface water, air or hazardous building materials or a chain of title review.
15. Unless otherwise stated, this assessment has considered the ongoing use of the Site and has not been prepared for the purposes of redevelopment which may act as a trigger for Site investigation and remediation works not needed for ongoing use.

1.1 Historical industrial land uses

Records within 500m

126

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 13**

1.2 Historical tanks

Records within 500m

134

Tank features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 13**

1.3 Historical energy features

Records within 500m

8

Energy features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 13**

This data is sourced from Ordnance Survey / Groundsure.

1.4 Historical petrol stations

Records within 500m

0

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.5 Historical garages

Records within 500m

0

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original ungrouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.6 Historical military land

Records within 500m

0

Areas of military land digitised from multiple sources including the National Archives, local records, MOD records and verified other sources, intelligently grouped into contiguous features.

This data is sourced from Ordnance Survey / Groundsure / other sources.

2 Past land use - un-grouped

2.1 Historical industrial land uses

Records within 500m

143

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 10,560 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use - un-grouped map on **page 25**

2.4 Historical petrol stations

Records within 500m

0

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

2.5 Historical garages

Records within 500m

0

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

3 Waste and landfill

- Site Outline
- Search buffers in metres (m)
- Active or recent landfill
- Historical landfill (EA/NRW)
- Historical landfill (LA/OS)
- Historical waste sites
- Licensed waste sites

3.1 Active or recent landfill

Records within 500m

3

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation. Features are displayed on the Waste and landfill map on **page 40**

ID	Location	Details	
3	299m E	Operator: Tata Steel U K Limited Site Address: Teesside Works, Steel House, Redcar, Cleveland, TS10 5QW	WML Number: 60138 EPR Reference: BRI003 Landfill type: A04: Household, Commercial & Industrial Waste Landfill Status: Closure IPPC Reference: - EPR Number: EA/EPR/KP3790ZE/V002

ID	Location	Details

6	374m E	Operator: Tata Steel U K Limited Site Address: Teesside Works, Steel House, Redcar, Cleveland, TS10 5QW	WML Number: 60138 EPR Reference: BRI003 Landfill type: A04: Household, Commercial & Industrial Waste Landfill Status: Closure IPPC Reference: - EPR Number: EA/EPR/KP3790ZE/V002

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m	0
----------------------------	----------

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m	3
----------------------------	----------

Landfill sites identified from Local Authority records and high detail historical mapping.

Features are displayed on the Waste and landfill map on **page 40**

ID	Location	Site address	Source	Data type
1	On site	Refuse Tip	1952 mapping	Polygon
A	On site	Refuse Tip	1952 mapping	Polygon
A	On site	Refuse Tip	1952 mapping	Polygon

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m

2

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

Features are displayed on the Waste and landfill map on **page 40**

ID	Location	Details		
B	93m N	Site Address: Warrenby, Land Adjacent To Redcar Blast Furnace, Redcar, Cleveland Licence Holder Address: Teesside Division, Steel House, Redcar, Cleveland	Waste Licence: Yes Site Reference: 0700/CLE/087 Waste Type: Inert, Industrial Environmental Permitting Regulations (Waste) Reference: YP1/L/BRI012 Licence Issue: 11/12/1979 Licence Surrender: 13/04/1997	Operator: - Licence Holder: British Steel Plc First Recorded - Last Recorded: -

This data is sourced from Ordnance Survey.

4.2 Current or recent petrol stations

Records within 500m

0

Open, closed, under development and obsolete petrol stations.

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m

0

High voltage underground electricity transmission cables.

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m

0

High pressure underground gas transmission pipelines.

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m

0

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m

3

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

Features are displayed on the Current industrial land use map on **page 45**

ID	Location	Company	Address	Operational status	Tier
14	On site	British Steel Corporation Ltd(bsc)	British Steel Corporation Ltd (bsc), Redcar Works, Redcar	Historical NIHHS Site	-

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m

0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m

1

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

Features are displayed on the Current industrial land use map on **page 45**

ID	Location	Details	
24	88m W	Operator: MULTISERV (ASR) LTD Installation Name: - Process: OTHER MINERAL ACTIVITIES; SCREENING ETC COAL ETC (UNLESS EXEMPT LOCATION) Permit Number: BM0206 Original Permit Number: BM0206	EPR Reference: - Issue Date: 26/03/2004 Effective Date: 01/04/2004 Last date noted as effective: 01/10/2004 Status: SUPERSEDED BY PAS

This data is sourced from the Environment Agency and Natural Resources Wales.

4.11 Licensed pollutant release (Part A(2)/B)

Records within 500m

0

Records of Part A(2) and Part B installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m

0

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m**0**

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.14 Pollutant release to surface waters (Red List)

Records within 500m**0**

Discharges of specified substances under the Environmental Protection (Prescribed Processes and Substances) Regulations 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.15 Pollutant release to public sewer

Records within 500m**0**

Discharges of Special Category Effluents to the public sewer.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.16 List 1 Dangerous Substances

Records within 500m**0**

Discharges of substances identified on List I of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.17 List 2 Dangerous Substances

Records within 500m**0**

Discharges of substances identified on List II of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.18 Pollution Incidents (EA/NRW)

Records within 500m

2

Records of substantiated pollution incidents. Since 2006 this data has only included category 1 (major) and 2 (significant) pollution incidents.

Features are displayed on the Current industrial land use map on **page 45**

ID	Location	Details	
12	On site	Incident Date: 24/09/2001 Incident Identification: 32506 Pollutant: Specific Waste Materials Pollutant Description: Tyres	Water Impact: Category 4 (No Impact) Land Impact: Category 3 (Minor) Air Impact: Category 4 (No Impact)
29	445m W	Incident Date: 03/10/2009 Incident Identification: 721753 Pollutant: Atmospheric Pollutants and Effects Pollutant Description: Dust	Water Impact: Category 4 (No Impact) Land Impact: Category 3 (Minor) Air Impact: Category 2 (Significant)

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m

0

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.20 Pollution inventory waste transfers

Records within 500m

0

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.21 Pollution inventory radioactive waste

Records within 500m

0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer

- Site Outline**
- Search buffers in metres (m)**
- Principal
 - Secondary A
 - Secondary B
 - Secondary Undifferentiated
 - Unproductive
 - Unknown

5.1 Superficial aquifer

Records within 500m

4

Aquifer status of groundwater held within superficial geology.

Features are displayed on the Hydrogeology map on **page 54**

ID	Location	Designation	Description
1	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
2	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

ID	Location	Designation	Description
3	467m W	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
4	484m W	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Bedrock aquifer

- Site Outline
- Search buffers in metres (m)
- Principal
- Secondary A
- Secondary B
- Secondary Undifferentiated
- Unproductive

5.2 Bedrock aquifer

Records within 500m

3

Aquifer status of groundwater held within bedrock geology.

Features are displayed on the Bedrock aquifer map on [page 56](#)

ID	Location	Designation	Description
1	On site	Secondary B	Predominantly lower permeability layers which may store/yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering. These are generally the water-bearing parts of the former non-aquifers
2	On site	Secondary (undifferentiated)	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type

ID	Location	Designation	Description
3	On site	Secondary (undifferentiated)	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Groundwater vulnerability

5.3 Groundwater vulnerability

Records within 50m

4

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on **page 58**

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
1	On site	Summary Classification: Secondary superficial aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: <300mm/year	Vulnerability: High Aquifer type: Secondary Thickness: >10m Patchiness value: >90% Recharge potential: High	Vulnerability: Medium Aquifer type: Secondary Flow mechanism: Well connected fractures
2	On site	Summary Classification: Secondary superficial aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: <300mm/year	Vulnerability: High Aquifer type: Secondary Thickness: >10m Patchiness value: >90% Recharge potential: High	Vulnerability: Medium Aquifer type: Secondary Flow mechanism: Well connected fractures
3	On site	Summary Classification: Secondary superficial aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: <300mm/year	Vulnerability: High Aquifer type: Secondary Thickness: >10m Patchiness value: >90% Recharge potential: No Data	Vulnerability: Medium Aquifer type: Secondary Flow mechanism: Well connected fractures
4	On site	Summary Classification: Secondary superficial aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: <300mm/year	Vulnerability: High Aquifer type: Secondary Thickness: >10m Patchiness value: >90% Recharge potential: High	Vulnerability: Medium Aquifer type: Secondary Flow mechanism: Well connected fractures

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.4 Groundwater vulnerability- soluble rock risk

Records on site

0

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

This data is sourced from the British Geological Survey and the Environment Agency.

5.5 Groundwater vulnerability- local information

Records on site

0

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk.

This data is sourced from the British Geological Survey and the Environment Agency.

Abstractions and Source Protection Zones

5.6 Groundwater abstractions

Records within 2000m

0

Licensed groundwater abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, between two points (line data) or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.7 Surface water abstractions

Records within 2000m

0

Licensed surface water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.8 Potable abstractions

Records within 2000m

0

Licensed potable water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m

0

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.10 Source Protection Zones (confined aquifer)

Records within 500m

0

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

This data is sourced from the Environment Agency and Natural Resources Wales.

6 Hydrology

- Site Outline
- Search buffers in metres (m)
- Water Network (OS MasterMap)
- Surface water features (wider than 5m)
- Surface water features (narrower than 5m)
- ⋯ WFD River, canal and surface water transfer water bodies
- WFD Lake water bodies
- WFD Transitional and coastal water bodies
- WFD Surface water body catchments boundaries
- WFD Groundwater body boundaries

6.1 Water Network (OS MasterMap)

Records within 250m

5

Detailed water network of Great Britain showing the flow and precise central course of every river, stream, lake and canal.

Features are displayed on the Hydrology map on **page 63**

ID	Location	Type of water feature	Ground level	Permanence	Name
A	124m SE	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	The Fleet

ID	Location	Type of water feature	Ground level	Permanence	Name
C	149m S	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	The Fleet
C	213m S	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	The Fleet
C	228m S	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	-
10	230m S	Inland river not influenced by normal tidal action.	On ground surface	Watercourse contains water year round (in normal circumstances)	The Fleet

This data is sourced from the Ordnance Survey.

6.2 Surface water features

Records within 250m

11

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on **page 63**

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site

2

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on **page 63**

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
2	On site	Coastal Catchment	Not part of a river WB catchment	368	Tees Lower and Estuary	Tees
3	On site	River	Tees Estuary (S Bank)	GB103025072320	Tees Lower and Estuary	Tees

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified

1

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on **page 63**

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
8	137m SE	River	Tees Estuary (S Bank)	GB103025072320	Moderate	Fail	Moderate	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

6.5 WFD Groundwater bodies

Records on site

1

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

Features are displayed on the Hydrology map on **page 63**

ID	Location	Name	Water body ID	Overall rating	Chemical rating	Quantitative	Year
1	On site	Tees Mercia Mudstone & Redcar Mudstone	GB40302G701300	Poor	Poor	Good	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

7 River and coastal flooding

7.1 Risk of flooding from rivers and the sea

Records within 50m**0**

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea (RoFRaS)/Flood Risk Assessment Wales (FRAW) models. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition. The risk categories for RoFRaS for rivers and the sea and FRAW for rivers are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance). The risk categories for FRAW for the sea are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 200 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 200 chance) or High (greater than or equal to 1 in 30 chance).

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m**0**

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m**0**

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m

0

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.5 Flood Storage Areas

Records within 250m

0

Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

This data is sourced from the Environment Agency and Natural Resources Wales.

River and coastal flooding - Flood Zones

7.6 Flood Zone 2

Records within 50m

0

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.7 Flood Zone 3

Records within 50m

0

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding

8.1 Surface water flooding

Highest risk on site

1 in 30 year, 0.1m - 0.3m

Highest risk within 50m

1 in 30 year, 0.3m - 1.0m

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on **page 69**

The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Greater than 1.0m
1 in 250 year	Between 0.3m and 1.0m
1 in 100 year	Between 0.3m and 1.0m
1 in 30 year	Between 0.1m and 0.3m

This data is sourced from Ambiantal Risk Analytics.

9 Groundwater flooding

— Site Outline
Search buffers in metres (m)

- High
- Moderate - High
- Moderate
- Low
- Negligible

9.1 Groundwater flooding

Highest risk on site

Low

Highest risk within 50m

Low

Groundwater flooding is caused by unusually high groundwater levels. It occurs when the water table rises above the ground surface or within underground structures such as basements or cellars. Groundwater flooding tends to exhibit a longer duration than surface water flooding, possibly lasting for weeks or months, and as a result it can cause significant damage to property. This risk assessment is based on a 1 in 100 year return period and a 5m Digital Terrain Model (DTM).

Features are displayed on the Groundwater flooding map on **page 71**

This data is sourced from Ambiantal Risk Analytics.

10 Environmental designations

- Site Outline
- Search buffers in metres (m)
- Sites of Special Scientific Interest (SSSI)
- X Conserved wetland sites (Ramsar sites)
- Special Protection Areas (SPA)
- X National Nature Reserves (NNR)
- X Proposed Ramsar sites

10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m

10

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

Features are displayed on the Environmental designations map on **page 72**

ID	Location	Name	Data source

-	1730m N	Teesmouth and Cleveland Coast	Natural England
-	1801m E	Teesmouth and Cleveland Coast	Natural England

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m

4

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

Features are displayed on the Environmental designations map on **page 72**

ID	Location	Site	Details
6	260m NE	Name: Teesmouth and Cleveland Coast Site status: Listed Data source: Natural England	Overview: Medium-large site encompassing a range of habitats (sand and mudflats, rocky shore, saltmarsh, freshwater marsh and sand dunes) on and around an estuary which has been much-modified by human activities. Together these habitats support internationally important numbers of waterbirds. Ramsar criteria: -
B	850m NE	Name: Teesmouth and Cleveland Coast Site status: Listed Data source: Natural England	Overview: Medium-large site encompassing a range of habitats (sand and mudflats, rocky shore, saltmarsh, freshwater marsh and sand dunes) on and around an estuary which has been much-modified by human activities. Together these habitats support internationally important numbers of waterbirds. Ramsar criteria: -

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m	0
-----------------------------	----------

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m	8
-----------------------------	----------

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

Features are displayed on the Environmental designations map on **page 72**

ID	Location	Name	Species of interest	Habitat description	Data source

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m

0

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m

0

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m**0**

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m**0**

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m**0**

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m**0**

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m**0**

Areas designated to prevent urban sprawl by keeping land permanently open.

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m

8

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

Features are displayed on the Environmental designations map on **page 72**

ID	Location	Name	Status
2	6m N	Teesmouth and Cleveland Coast	Proposed
A	842m E	Teesmouth and Cleveland Coast	Proposed
B	851m NE	Teesmouth and Cleveland Coast	Proposed
8	856m SW	Teesmouth and Cleveland Coast	Proposed
C	864m W	Teesmouth and Cleveland Coast	Proposed
D	1108m E	Teesmouth and Cleveland Coast	Proposed
-	1448m N	Teesmouth and Cleveland Coast	Proposed
-	1730m N	Teesmouth and Cleveland Coast	Proposed

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m

0

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m

0

Special Protection Areas (SPAs) are areas designated (or 'classified') under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.15 Nitrate Sensitive Areas

Records within 2000m

0

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones

Records within 2000m

0

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

This data is sourced from Natural England and Natural Resources Wales.

SSSI Impact Zones and Units

- Unfavourable - Recovering
- Unfavourable - No change
- Unfavourable - Declining
- Partially destroyed
- Destroyed

10.17 SSSI Impact Risk Zones

Records on site

4

Developed to allow rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

Features are displayed on the SSSI Impact Zones and Units map on **page 80**

ID	Location	Type of developments requiring consultation
1	On site	All applications - All planning applications - except householder applications.

ID	Location	Type of developments requiring consultation
2	On site	Infrastructure - Pipelines, pylons and overhead cables. any transport proposal including road, rail and by water (excluding routine maintenance). airports, helipads and other aviation proposals. Wind and Solar - Solar schemes with footprint > 0.5ha, all wind turbines. Minerals, Oil and Gas - Planning applications for quarries, including: new proposals, review of minerals permissions (romp), extensions, variations to conditions etc. oil & gas exploration/extraction. Rural non-residential - Large non residential developments outside existing settlements/urban areas where net additional gross internal floorspace is > 1,000m² or footprint exceeds 0.2ha. Residential - Residential development of 10 units or more. Rural residential - Any residential development of 10 or more houses outside existing settlements/urban areas. Air pollution - Any industrial/agricultural development that could cause air pollution (incl: industrial processes, livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 200m², manure stores > 250t). Combustion - General combustion processes >20mw energy input. incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion. Waste - Landfill. incl: inert landfill, non-hazardous landfill, hazardous landfill. Composting - Any composting proposal with more than 500 tonnes maximum annual operational throughput. incl: open windrow composting, in-vessel composting, anaerobic digestion, other waste management. Discharges - Any discharge of water or liquid waste of more than 2m³/day to ground (ie to seep away) or to surface water, such as a beck or stream. Water supply - Large infrastructure such as warehousing / industry where net additional gross internal floorspace is > 1,000m² or any development needing its own water supply .

ID	Location	Type of developments requiring consultation
3	On site	All applications - All planning applications (except householder) outside or extending outside existing settlements/urban areas affecting greenspace, farmland, semi natural habitats or landscape features such as trees, hedges, streams, rural buildings/structures. Infrastructure - Pipelines, pylons and overhead cables. any transport proposal including road, rail and by water (excluding routine maintenance). airports, helipads and other aviation proposals. Wind and Solar - Solar schemes with footprint > 0.5ha, all wind turbines. Minerals, Oil and Gas - Planning applications for quarries, including: new proposals, review of minerals permissions (romp), extensions, variations to conditions etc. oil & gas exploration/extraction. Rural non-residential - Large non residential developments outside existing settlements/urban areas where net additional gross internal floorspace is > 1,000m² or footprint exceeds 0.2ha. Residential - Residential development of 10 units or more. Rural residential - Any residential developments outside of existing settlements/urban areas with a total net gain in residential units. Air pollution - Any development that could cause air pollution or dust either in its construction or operation (incl: industrial/commercial processes, livestock & poultry units, slurry lagoons & digestate stores, manure stores). Combustion - All general combustion processes. incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion. Waste - Mechanical and biological waste treatment, inert landfill, non-hazardous landfill, hazardous landfill, household civic amenity recycling facilities construction, demolition and excavation waste, other waste management. Composting - Any composting proposal. incl: open windrow composting, in-vessel composting, anaerobic digestion, other waste management. Discharges - Any discharge of water or liquid waste that is discharged to ground (ie to seep away) or to surface water, such as a beck or stream. Water supply - Large infrastructure such as warehousing / industry where net additional gross internal floorspace is > 1,000m² or any development needing its own water supply .

ID	Location	Type of developments requiring consultation
4	On site	All applications - All planning applications (except householder) outside or extending outside existing settlements/urban areas affecting greenspace, farmland, semi natural habitats or landscape features such as trees, hedges, streams, rural buildings/structures. Infrastructure - Pipelines, pylons and overhead cables. any transport proposal including road, rail and by water (excluding routine maintenance). airports, helipads and other aviation proposals. 10.18 SSSI Units

Records within 2000m

14

Divisions of SSSIs used to record management and condition details. Units are the smallest areas for which Natural England gives a condition assessment, however, the size of units varies greatly depending on the types of management and the conservation interest.

Features are displayed on the SSSI Impact Zones and Units map on **page 80**

ID: 6

11 Visual and cultural designations

11.1 World Heritage Sites

Records within 250m

0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m

0

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m

0

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m

0

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.5 Conservation Areas

Records within 250m

0

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m

0

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.7 Registered Parks and Gardens

Records within 250m

0

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

12 Agricultural designations

- Site Outline
- Search buffers in metres (m)
- Grade 1 - excellent quality
- Grade 2 - very good quality
- Grade 3 - good to moderate quality
- Grade 3a - good quality
- Grade 3b - moderate quality
- Grade 4 - poor quality
- Grade 5 - very poor quality
- Non-agricultural land
- Urban land
- Exclusion land
- Tree felling licences
- Open Access land

12.1 Agricultural Land Classification

Records within 250m

3

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on **page 94**

ID	Location	Classification	Description
1	On site	Urban	-
2	On site	Non Agricultural	-

ID	Location	Classification	Description
3	On site	Non Agricultural	-

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m

0

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m

0

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

This data is sourced from the Forestry Commission.

12.4 Environmental Stewardship Schemes

Records within 250m

0

Environmental Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. The schemes identified may be historical schemes that have now expired, or may still be active.

This data is sourced from Natural England.

12.5 Countryside Stewardship Schemes

Records within 250m

0

Countryside Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. Main objectives are to improve the farmed environment for wildlife and to reduce diffuse water pollution.

This data is sourced from Natural England.

13.1 Priority Habitat Inventory

Records within 250m

15

Habitats of principal importance as named under Natural Environment and Rural Communities Act (2006) Section 41.

Features are displayed on the Habitat designations map on **page 96**

ID	Location	Main Habitat	Other habitats
2	On site	No main habitat but additional habitats present	Additional: CFPGM (FEP 50%); RBEDS (FEP 50%); LCGRA (FEP 50%); LMEAD (FEP 50%)
9	6m N	Coastal sand dunes	Main habitat: CSDUN (INV > 50%)
10	8m SE	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (INV > 50%, ENSIS L1)

ID	Location	Main Habitat	Other habitats
13	34m E	No main habitat but additional habitats present	Main habitat: RBEDS (INV > 50%); CSDUN (INV > 50%, ENSIS L1)
A	60m N	No main habitat but additional habitats present	Main habitat: RBEDS (INV > 50%); CSDUN (ENSIS L1)
14	63m E	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (ENSIS L1)
17	83m NE	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (INV > 50%, ENSIS L1)
19	101m E	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (INV > 50%, ENSIS L1)
B	103m N	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (INV > 50%, ENSIS L1)
20	103m E	Coastal sand dunes	Main habitat: CSDUN (INV > 50%, ENSIS L1)
23	148m N	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (ENSIS L1)
24	149m N	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (ENSIS L1)
A	170m N	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (ENSIS L1)
26	180m E	Coastal sand dunes	Main habitat: CSDUN (INV > 50%)
A	187m N	Coastal sand dunes	Main habitat: RBEDS (INV > 50%); CSDUN (ENSIS L1)

This data is sourced from Natural England.

13.2 Habitat Networks

Records within 250m

18

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

Features are displayed on the Habitat designations map on **page 96**

ID	Location	Type	Habitat
1	On site	Network Enhancement Zone 2	Not specified
4	On site	Restorable Habitat	Not specified
5	On site	Restorable Habitat	Not specified
6	On site	Restorable Habitat	Not specified
7	On site	Network Enhancement Zone 1	Not specified
8	On site	Primary Habitat	Coastal sand dunes
12	29m N	Network Enhancement Zone 1	Not specified

ID	Location	Type	Habitat
B	61m N	Network Enhancement Zone 1	Not specified
15	65m W	Network Enhancement Zone 1	Not specified
16	67m E	Restorable Habitat	Not specified
18	99m E	Restorable Habitat	Not specified
21	126m N	Network Enhancement Zone 1	Not specified
22	131m E	Restorable Habitat	Not specified
25	177m N	Network Enhancement Zone 1	Not specified
27	183m NE	Network Enhancement Zone 1	Not specified
28	205m N	Network Enhancement Zone 1	Not specified
29	224m NW	Network Enhancement Zone 1	Not specified
30	245m NE	Network Enhancement Zone 1	Not specified

This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m	2
----------------------------	----------

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

Features are displayed on the Habitat designations map on **page 96**

ID	Location	Site reference	Identification confidence	Primary source	Secondary source	Tertiary source
3	On site	NLUD Ref: 73100018	Low	National Land Use Database - Previously Developed Land	UK Perspectives Aerial Photography	-
11	9m E	NLUD Ref: 73100017	Low	National Land Use Database - Previously Developed Land	UK Perspectives Aerial Photography	-

This data is sourced from Natural England.

13.4 Limestone Pavement Orders

Records within 250m

0

Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

14 Geology 1:10,000 scale - Availability

- Site Outline**
- Search buffers in metres (m)
- Full coverage
 - Partial coverage
 - No coverage

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

14.1 10k Availability

Records within 500m

2

An indication on the coverage of 1:10,000 scale geology data for the site, the most detailed dataset provided by the British Geological Survey. Either 'Full', 'Partial' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:10,000 scale - Availability map on **page 100**

ID	Location	Artificial	Superficial	Bedrock	Mass movement	Sheet No.
1	On site	Full	Full	Full	No coverage	NZ52NE

Please see table for more details.

14.3 Superficial geology (10k)

Records within 500m

1

Superficial geological deposits at 1:10,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:10,000 scale - Superficial map on **page 102**

ID	Location	LEX Code	Description	Rock description
1	431m W	MEA-XSZC	Marine Or Estuarine Alluvium - Sand, Silt And Clay	Sand, Silt And Clay

This data is sourced from the British Geological Survey.

14.4 Landslip (10k)

Records within 500m

0

Mass movement deposits on BGS geological maps at 1:10,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Bedrock

— Site Outline

Search buffers in metres (m)

.... Bedrock faults and other linear features (10k)

Bedrock geology (10k)
Please see table for more details.

14.5 Bedrock geology (10k)

Records within 500m

2

Bedrock geology at 1:10,000 scale. The main mass of rocks forming the Earth and present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 104**

ID	Location	LEX Code	Description	Rock age
1	431m W	RMU-MDST	Redcar Mudstone Formation - Mudstone	Pliensbachian Age - Hettangian Age
2	490m W	PNG-MDST	Penarth Group - Mudstone	Rhaetian Age

This data is sourced from the British Geological Survey.

14.6 Bedrock faults and other linear features (10k)

Records within 500m

0

Linear features at the ground or bedrock surface at 1:10,000 scale of six main types; rock, fault, fold axis, mineral vein, alteration area or landform. Features are either observed or inferred, and relate primarily to bedrock.

This data is sourced from the British Geological Survey.

15 Geology 1:50,000 scale - Availability

This data is sourced from the British Geological Survey.

17 Natural ground subsidence - Shrink swell clays

17.1 Shrink swell clays

Records within 50m

4

The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

Features are displayed on the Natural ground subsidence - Shrink swell clays map on **page 115**

Location	Hazard rating	Details
On site	Negligible	Ground conditions predominantly non-plastic.
On site	Very low	Ground conditions predominantly low plasticity.
2m E	Very low	Ground conditions predominantly low plasticity.

Location	Hazard rating	Details
19m E	Very low	Ground conditions predominantly low plasticity.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

17.2 Running sands

Records within 50m

5

The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

Features are displayed on the Natural ground subsidence - Running sands map on **page 117**

Location	Hazard rating	Details
On site	Very low	Running sand conditions are unlikely. No identified constraints on land use due to running conditions unless water table rises rapidly.

Location	Hazard rating	Details
On site	Low	Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.
On site	High	Running sand conditions are almost certainly present. Constraints will apply to land uses involving excavation or the addition or removal of water.
2m E	High	Running sand conditions are almost certainly present. Constraints will apply to land uses involving excavation or the addition or removal of water.
19m E	High	Running sand conditions are almost certainly present. Constraints will apply to land uses involving excavation or the addition or removal of water.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

17.3 Compressible deposits

Records within 50m

5

The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

Features are displayed on the Natural ground subsidence - Compressible deposits map on **page 119**

Location	Hazard rating	Details
On site	Negligible	Compressible strata are not thought to occur.
On site	Very low	Compressibility and uneven settlement problems are not likely to be significant on the site for most land uses.

Location	Hazard rating	Details
On site	Moderate	Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.
2m E	Moderate	Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.
19m E	Moderate	Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.

This data is sourced from the British Geological Survey.

17.4 Collapsible deposits

Records within 50m

1

The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on **page 121**

Location	Hazard rating	Details
On site	Negligible	Deposits with potential to collapse when loaded and saturated are believed not to be present.

This data is sourced from the British Geological Survey.

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☒ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.5 Landslides

Records within 50m

1

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

Features are displayed on the Natural ground subsidence - Landslides map on **page 122**

Location	Hazard rating	Details
On site	Very low	Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks

- Site Outline
- Search buffers in metres (m)
- ☐ No data
 - ☐ Negligible
 - ☐ Very low
 - ☐ Low
 - ☐ Moderate
 - ☐ High

17.6 Ground dissolution of soluble rocks

Records within 50m

1

The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on **page 123**

Location	Hazard rating	Details
On site	Negligible	Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.

This data is sourced from the British Geological Survey.

18 Mining, ground workings and natural cavities

- Site Outline
- Search buffers in metres (m)
- Natural cavities (Area)
- Natural cavities (Point)
- BritPits
- Surface ground workings
- Underground workings
- Historical Mineral Planning Areas
- Mining Cavities
- Non Coal Mining
- Sporadic underground mining of restricted extent possible
- Localised small scale underground mining possible
- Small scale mining possible
- Underground mining known or likely within or in close proximity
- Underground mining known within or in very close proximity

18.1 Natural cavities

Records within 500m

0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Stantec UK Ltd.

18.2 BritPits

Records within 500m

0

BritPits (an abbreviation of British Pits) is a database maintained by the British Geological Survey of currently active and closed surface and underground mineral workings. Details of major mineral handling sites, such as wharfs and rail depots are also held in the database.

This data is sourced from the British Geological Survey.

18.3 Surface ground workings

Records within 250m

65

Historical land uses identified from Ordnance Survey mapping that involved ground excavation at the surface. These features may or may not have been subsequently backfilled.

Features are displayed on the Mining, ground workings and natural cavities map on **page 125**

This is data is sourced from Ordnance Survey/Groundsure.

18.4 Underground workings

Records within 1000m

2

Historical land uses identified from Ordnance Survey mapping that indicate the presence of underground workings e.g. mine shafts.

Features are displayed on the Mining, ground workings and natural cavities map on **page 125**

ID	Location	Land Use	Year of mapping	Mapping scale
I	81m SE	Iron Workings	1893	1:10560
Q	236m E	Unspecified Workings	1983	1:10000

This data is sourced from Ordnance Survey/Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m

1

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

Features are displayed on the Mining, ground workings and natural cavities map on **page 125**

ID	Location	Site Name	Mineral	Type	Planning Status	Planning Status Date
16	119m S	Wilton Works	Not available	Surface mineral working	Valid	Not available

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m

0

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

This data is sourced from the British Geological Survey.

18.7 Mining cavities

Records within 1000m

0

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

This data is sourced from Stantec UK Ltd.

18.8 JPB mining areas

Records on site	0
-----------------	---

Areas which could be affected by former coal and other mining. This data includes some mine plans unavailable to the Coal Authority.

This data is sourced from Johnson Poole and Bloomer.

18.9 Coal mining

Records on site	0
-----------------	---

Areas which could be affected by past, current or future coal mining.

This data is sourced from the Coal Authority.

18.10 Brine areas

Records on site	0
-----------------	---

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.11 Gypsum areas

Records on site	0
-----------------	---

Generalised areas that may be affected by gypsum extraction.

This data is sourced from British Gypsum.

18.12 Tin mining

Records on site	0
-----------------	---

Generalised areas that may be affected by historical tin mining.

This data is sourced from Groundsure.

18.13 Clay mining

Records on site	0
-----------------	---

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Radon

© Crown copyright and database rights 2022. Ordnance Survey licence 100035207

- Site Outline**
- Search buffers in metres (m)**
- Greater than 30%
 - Between 10% and 30%
 - Between 5% and 10%
 - Between 3% and 5%
 - Between 1% and 3%
 - Less than 1%

19.1 Radon

Records on site

2

Estimated percentage of dwellings exceeding the Radon Action Level. This data is the highest resolution radon dataset available for the UK and is produced to a 75m level of accuracy to allow for geological data accuracy and a 'residential property' buffer. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain. The data was derived from both geological assessments and long term measurements of radon in more than 479,000 households.

Features are displayed on the Radon map on **page 132**

Location	Estimated properties affected	Radon Protection Measures required
On site	Between 1% and 3%	None
On site	Less than 1%	None**

This data is sourced from the British Geological Survey and Public Health England.

20 Soil chemistry

20.1 BGS Estimated Background Soil Chemistry

Records within 50m

31

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km². In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km²; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

20.2 BGS Estimated Urban Soil Chemistry

Records within 50m

0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km²).

This data is sourced from the British Geological Survey.

20.3 BGS Measured Urban Soil Chemistry

Records within 50m

0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km².

This data is sourced from the British Geological Survey.

21.1 Underground railways (London)

Records within 250m

0

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

21.2 Underground railways (Non-London)

Records within 250m

0

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

21.3 Railway tunnels

Records within 250m

0

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

21.4 Historical railway and tunnel features

Records within 250m

78

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

Features are displayed on the Railway infrastructure and projects map on **page 137**

21.5 Royal Mail tunnels

Records within 250m

0

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

21.6 Historical railways

Records within 250m

6

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

Features are displayed on the Railway infrastructure and projects map on **page 137**

Location	Description
41m S	Abandoned
60m S	Disused
86m SE	Abandoned
109m S	Disused

21.8 Crossrail 1

Records within 500m
0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

21.9 Crossrail 2

Records within 500m**0**

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

This data is sourced from publicly available information by Groundsure.

21.10 HS2

Records within 500m**0**

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 Ltd.

Data providers

Groundsure works with respected data providers to bring you the most relevant and accurate information. To find out who they are and their areas of expertise see <https://www.groundsure.com/sources-reference>.

APPENDIX E

Site Photos April 2022

CLIENT:	South Tees Development Corporation			 ARCADIS	Design & Consultancy for natural and built assets
Project:	10035117	Site Name:	Teesworks – Land West of Warrenby		

1 Whitehall Riverside
Leeds
LS1 4BN

Plate 1

South End of site- former materials storage area with sinter plant in distance.

April 2022.

Plate 2

Former materials storage area with sinter plant and pellet tunnel in middle distance, Redcar blast furnace and coke oven complexes (off site) in far distance.

April 2022.

CLIENT:	South Tees Development Corporation			 ARCADIS	Design & Consultancy for natural and built assets
Project:	10035117	Site Name:	Teesworks – Land West of Warrenby		

1 Whitehall Riverside
Leeds
LS1 4BN

Plate 3

View along eastern site boundary from SE corner. Note windfarm (offsite) in North Sea.

April 2022.

Plate 4

Sinter Plant- currently being demolished.

April 2022.

CLIENT:	South Tees Development Corporation			 ARCADIS Design & Consultancy for natural and built assets
Project:	10035117	Site Name:	Teesworks – Land West of Warrenby	
				1 Whitehall Riverside Leeds LS1 4BN
Plate 5 Undeveloped area north of sinter plant. April 2022.				
Plate 6 Area of disused hardstanding north of TMO. Note disused overhead gantry in distance. April 2022.				

CLIENT:	South Tees Development Corporation			 ARCADIS	Design & Consultancy for natural and built assets
Project:	10035117	Site Name:	Teesworks – Land West of Warrenby		

1 Whitehall Riverside
Leeds
LS1 4BN

Plate 7

Disused overhead gantry and partially demolished conveyor. Central area.

April 2022.

Plate 8

Disused diesel tank and pellet tunnel. Central area of site.

April 2022.

CLIENT:	South Tees Development Corporation			 ARCADIS Design & Consultancy for natural and built assets
Project:	10035117	Site Name:	Teesworks – Land West of Warrenby	
				1 Whitehall Riverside Leeds LS1 4BN
Plate 9 North-west corner of site. Demolition works at former blast furnace stockhouse and RDL stores. Overhead pipeline in foreground is also being demolished. (Note blast furnace in distance is off site). April 2022.				
Plate 10 North east corner of site. Former rail tracks in foreground and hummocky area in mid ground. April 2022.				

APPENDIX F

UXO Risk Assessment

Detailed Unexploded Ordnance (UXO) Threat & Risk Assessment

Meeting the requirements of *CIRIA* C681 'Unexploded Ordnance (UXO)
A Guide for the Construction Industry' Risk Management Framework

PROJECT NUMBER	8588	ORIGINATOR	D. Barrett
PROJECT	Redcar Steelworks	REVIEWED BY	B. Wilkinson
CLIENT	South Tyneside Development Corporation	RELEASED BY	L. Gregory
VERSION	1.0	DATE	30 th March 2022
UXO RISK RATING	VERY HIGH/HIGH - This Study Site requires further action in all previously undisturbed ground to reduce risk to ALARP during intrusive activities.		

Contents

Contents.....	1
Acronyms and Abbreviations	2
EXECUTIVE SUMMARY	3
ASSESSMENT METHODOLOGY	5
STAGE ONE – STUDY SITE LOCATION AND DESCRIPTION.....	6
STAGE TWO – REVIEW OF HISTORICAL DATASETS	8
STAGE THREE – DATA ANALYSIS	13
STAGE FOUR – RISK ASSESSMENT	14
STAGE FIVE – RECOMMENDED RISK MITIGATION MEASURES.....	18
Report Figures.....	19

FIGURES

- Figure One - Study Site Location
- Figure Two - Study Site Boundary
- Figure Three - Aerial Photography (2020)
- Figure Four - WWII High Explosive Bomb Density
- Figure Five - WWII *Luftwaffe* Bombing Targets
- Figure Six - WWII Abandoned Bombs
- Figure Seven - WWII Defensive Features
- Figure Eight - WWII Risk Zones
- Figure Eight b – UXO Risk Zones (Very High Risk Zones)

Acronyms and Abbreviations

AA	Anti-Aircraft	NEQ	Net Explosive Quantity
AAA	Anti-Aircraft Ammunition	NFF	National Filling Factory
ALARP	As Low As Reasonably Practicable	NGR	National Grid Reference
AOD	Above Ordnance Datum	OD	Ordnance Datum
ARP	Air Raid Precaution	OS	Ordnance Survey
AXO	Abandoned Explosive Ordnance	PM	Parachute Mine
BD	Bomb Disposal	PoW	Prisoner of War
BDO	Bomb Disposal Officer	RADAR	Radio Detection And Ranging
bgl	Below Ground Level	RAF	Royal Air Force
BGS	British Geological Survey	RN	Royal Navy
BH	Borehole	RNAS	Royal Naval Air Service
BPD	Bomb Penetration Depth	ROF	Royal Ordnance Factory
CDP	Cast Driven Piles	SAA	Small Arms Ammunition
CFA	Continuous Flight Auger	TA	Territorial Army
CIRIA	Construction Industry Research and Information Association	TNT	Trinitrotoluene
CPT	Cone Penetration Testing	UK	United Kingdom
CS	County Series	UN	United Nations
EO	Explosive Ordnance	USAAF	United States Army Air Force
EOC	Explosive Ordnance Clearance	UXB	Unexploded Bomb
EOD	Explosive Ordnance Disposal	UXO	Unexploded Ordnance
GI	Ground Investigation	V Weapons	<i>Vergeltungswaffen</i> – Vengeance Weapons
GIS	Geographic Information Systems	WD	War Department
GL	Ground Level	WWI	World War One
GP	General Purpose	WWII	World War Two
GPS	Global Positioning Systems		
HAA	Heavy Anti-Aircraft		
HE	High Explosive		
HO	Home Office		
HSE	Health and Safety Executive		
IB	Incendiary Bomb		
kg	Kilograms		
km	Kilometres		
LAA	Light Anti-Aircraft		
LCC	London County Council		
LE	Low Explosive

EXECUTIVE SUMMARY

Study Site

The Client has defined the Study Site as “Redcar Steelworks, Redcar” and it is centred on NGR 455655, 523772.

Risk Level

VERY HIGH

The VERY HIGH risk zones are located in a 50m radius around the abandoned WWII bombs

HIGH

The HIGH risk zone encompasses the remainder of the Site

Potential Threat Sources

The most probable UXO threat is posed by WWII-era *German* HE bombs, *British* AXO/LSA/SAA, IBs, and *British* AAA projectiles (which were used to defend against *German* bombing raids).

Risk Pathway

Given the types of UXO that might be present on-site, all types of aggressive intrusive engineering activities may generate a significant risk pathway.

Key Findings

During WWII, the Study Site was situated within *Guisborough* and *Eston Urban Districts*, *Redcar Municipal Borough* and *Middlesborough County Borough*, which recorded two, six, three and four HE bomb strikes per 100 hectares, all “very low” levels of bombing.

Luftwaffe aerial reconnaissance photography associated with the Study Site identified five primary bombing targets on-site and these were the *Cleveland Iron Works*, *Redcar Iron Works*, *River Tees Dockyard*, *Tar Distillation Chemical Works* and *South Bank Station*.

ARP records associated with the Study Site were not available. Nonetheless, a number of “abandoned bombs” were recorded on-site, with further research of historical records identifying evidence of bombing across the Study Site generally. Specifically, the *Redcar Iron Works*, *Southbank (Cleveland) Steel Works*, *Stapylton Street*, *West Coatham Grange* were all recorded as being bombed during WWII to varying degrees.

Official bomb damage mapping associated with the Study Site was not available. Nonetheless, an analysis of post-war mapping identified numerous “Ruins” across the Study Site, which may be indicative of bomb damage given the extensive bombing in the area. Further research of historical records also identified bomb damage at the *Redcar Iron Works* located on-site and around *Southbank* and *Grangetown*.

Extensive military activity has also been documented on-site previously. For example, a bombing decoy site was constructed at *Bran Sands*, with two historic artillery firing ranges also located on-site. During WWII, numerous anti-invasion installations were also built within the Site including beach minefields, pillboxes and AAA gun batteries. In addition, the Client has informed 6 Alpha that multiple UXO encounters have occurred within the Site previously that appear to be as a result of the extensive military use of the Site previously.

Pre-WWII mapping (1938) associated with the Study Site shows that it was located within a densely developed and industrialised urban area during WWII. The Study Site itself consisted of numerous structures - mainly located in the southern and northern sectors - with large areas of undeveloped ground also present around the central sector. Notwithstanding the high levels of footfall expected in all developed areas of the Site, in any areas that were damaged by bombing during WWII, it is plausible bomb damage debris may have masked a UXB entry hole and caused it to go unnoticed. In all undeveloped areas of the Site there is a higher likelihood that any UXBs impacting within the Site would have done so unnoticed due to the generally lower level of expected footfall.

In the 1970s and 1980s, extensive development occurred on-site, mostly notably with the construction of the *Teesside Works*, which covered large swathes of the Study Site. More generally, it is considered likely that any UXO within post-war disturbed and developed ground would potentially have been discovered and removed. However, some areas of the Site have not undergone extensive redevelopment work and the potential for buried UXO to be present within any remaining areas of undisturbed ground is assessed to be extant.

EXECUTIVE SUMMARY (...continued)

Given that large areas across the Study Site were subjected to extensive bombing during WWII, combined with the extensive military occupation previously and the quantity of potential UXO encounters, the following risk mitigation measures are recommended as a minimum in order to reduce risks ALARP during intrusive works in all previously undisturbed ground (i.e., that which has not previously been excavated, probed, drilled or otherwise intrusively disturbed since it was potentially contaminated with UXO)

Recommended Risk Mitigation Measures Overview – All Areas

“Open” Intrusive Works

Engineering Methodology	UXO Emergency Response Plan	UXO Safety and Awareness Briefing	On-Call EOD Engineer	Non-Intrusive Magnetometer Survey	EODE Watching Brief	Intrusive Magnetometer Survey	UXO Risk Rating (Post-Mitigation)
Trial Pits	✓	✓	✗	✓	✓	✗	ALARP
Excavations	✓	✓	✗	✓	✓	✗	
Trenching	✓	✓	✗	✓	✓	✗	

“Blind” Intrusive Works

Engineering Methodology	UXO Emergency Response Plan	UXO Safety and Awareness Briefing	On-Call EOD Engineer	Non-Intrusive Magnetometer Survey	EODE Watching Brief	Intrusive Magnetometer Survey	UXO Risk Rating (Post-Mitigation)
Boreholes	✓	✓	✗	✗	✗	✓	ALARP
Window Sampling	✓	✓	✗	✗	✗	✓	
Piling	✓	✓	✗	✗	✗	✓	

A full and detailed guide to the recommended risk mitigation measures is presented at Section 5 of this report.

ASSESSMENT METHODOLOGY

Approach

6 Alpha Associates is an independent, specialist risk management consultancy practice, which has assessed the prospective UXO risk at this Study Site by employing a process advocated by CIRIA. The CIRIA guide for managing UXO risks in the construction industry (C681) not only represents industry best practice but has also been endorsed by the UK's HSE. 6 Alpha were the lead technical author of the CIRIA C681 guide.

UXO hazards can be identified through the investigation of local and national archives associated with the Study Site, MoD archives, local historical sources, historical mapping as well as contemporary aerial photography (where it is available). Prospective hazards will have only been recorded if there is specific information that could reasonably place them within the boundaries of the Study Site. The amalgamation of information is then assessed within a Semi-Quantitative Risk Assessment (as per industry best practice outlined in CIRIA C681) in order to form the basis of a proportional UXO risk mitigation strategy in circumstances where the SQRA evidences that further action is necessary in order to reduce the UXO risk at the Study Site.

The assessment of UXO risk is a measure of the probability of UXO encounter and initiation and the consequence of an inadvertent UXO initiation; the former being a function of the identified hazard and proposed development methodology and the latter being a function of the type of hazard and the proximity of personnel (and/or other 'sensitive receptors', such as equipment) to the hazard. UXO risk is thus calculated using the following formula:

$$\text{Risk (R)} = \text{Probability (P)} \times \text{Consequence (C)}$$

If intolerable UXO risks are identified, the methods of mitigation we have recommended are considered reasonable and sufficiently robust to reduce them to ALARP. We advocate the adoption of the ALARP legal principle because it is a key factor in efficiently and effectively ameliorating UXO risks. It also provides a ready means for assessing the Client's tolerability of UXO risk. In essence, the principle states that if the cost of reducing a risk significantly outweighs the benefit, then the risk may be considered tolerable. This does not mean that there is never a requirement for UXO risk mitigation, but that any mitigation must demonstrate that it is beneficial. Any additional mitigation that delivers diminishing benefits and that consume disproportionate time, money and effort are considered *de minimis* and thus unnecessary. Because of this principle, UXB and UXO risks will rarely be reduced to zero (nor need they be).

Important Notes

Although this report is up to date and accurate at the time of writing, 6 Alpha's UXO threat databases are continually being populated and updated as and when additional information becomes available. Nonetheless, 6 Alpha have exercised all reasonable care, skill and due diligence in providing this service and producing this report.

The assessment levels are also based upon our professional opinion and have been supported by our interpretation of historical records and third-party data sources. Wherever possible, 6 Alpha has sought to corroborate and to verify the accuracy of all data we have employed, but we are not accountable for any inherent errors that may be contained in third party data sets (e.g., *National Archive* or other library sources), and over which 6 Alpha cannot exercise control.

STAGE ONE – STUDY SITE LOCATION AND DESCRIPTION

Study Site

The Client has defined the Study Site as “Redcar Steelworks, Redcar”. The Study Site is centred at NGR 455655, 523772 as presented at *Figures 1 and 2*, respectively.

Location Description

The Study Site is situated north-east of the *Town of Middlesborough*, within *Teesside* and totals an area of 1,819 hectares (ha).

Furthermore, the Study Site is bounded by:

- North: The *River Tees* and *Tees Bay*;
- East: Numerous structures and roads as part of *Redcar*, *Coatham* and *Lazenby*;
- South: Numerous structures and roads as part of *South Bank*, *Grangetown* and *Dormanstown*;
- West: The *River Tees* and *Tees Bay*.

Aerial Photography (2020) (*Figure 3*)

Current aerial photography corroborates the information above and shows that the Study Site is situated within a heavily developed and industrialised urban area. The Study Site itself consists of numerous structures (some of which are disused structures associated with the former *Redcar* steel works in the north of the Site), areas of hardstanding and areas of undeveloped ground.

Proposed Works

The Client has provided *6 Alpha* with the document “10035117-AUK-XX-XX-CO-ZZ-0497-01-Site Wide UXO” which described the following scope of works:

- “Potential ground investigation works- all areas, including trial pits and boreholes up to 25m bgl.
- Bulk Excavation- all areas- typically 5m below current ground level- but may be deeper where large strictures encountered.
- Removal of late 20th Century landfill for processing Warrenby 3A area.
- Removal of late 20th Century landfill for stabilisation/disposal SLEMs area.
- Removal of late 20th Century landscape mounds east of Steel House.
- Future foundations are not known, but may include CFA or driven piles- all areas.”

Ground Conditions

It is important to establish the specific ground conditions in order to determine the maximum *German* UXB penetration depth as well as the potential for other types of munitions to be buried.

If the site investigations and/or construction methodologies change, and/or if a specific methodology is to be employed, and/or if the scope of work is focused upon a specific part of the Study Site, then *6 Alpha* are to be informed so that the prospective UXO risks and the associated risk mitigation methodology might be re-assessed. Certain ground conditions may also constrain certain types of UXO risk mitigative works e.g., magnetometer survey is adversely affected in mineralised and made ground.

The Client has provided *6 Alpha* with the document “10035117-AUK-XX-XX-CO-ZZ-0497-01-Site Wide UXO” which described the ground conditions as follows:

“Ground conditions vary widely across the site, however in many areas these are dominated by significant thicknesses of iron and steel making slag- particularly those areas reclaimed from the *Tees*.”

It is important to establish the provenance of made ground, where this is recorded as being part of the ground make-up, in order to accurately determine the ground levels at the time when UXO contamination may have occurred so as to accurately determine the average/maximum bomb penetration depths and subsequently to make appropriate recommendations aimed at reducing the risk to ALARP.

STAGE ONE – STUDY SITE LOCATION AND DESCRIPTION (...continued)

Ground Conditions

The Client has provided 6 Alpha with the document “4153 & 4154 Area A Former Steelworks Redcar Contract 1 & 2 (Area A) (Final report)” which includes the borehole log “S1-BH05” (located in the Study Site’s north-eastern sector) which recorded the following strata:

Depth bgl (m)	Strata	Description
0.00m to 0.10m	Made Ground	(Brown sandy clay with some rootlets)
0.10m to 2.90m	Made Ground	(Brown slightly sandy gravelly clay. Sand is fine to coarse. Gravel is fine to coarse angular and includes slag, concrete and brick).
2.90m to 4.80m	Made Ground	(Brown grey sandy gravel and cobbles. Sand is fine to coarse. Gravel is fine to coarse subangular and includes slag, concrete and brick. Cobbles are subangular to rounded and includes concrete and slag).
4.80m to 7.00m	Clay	Soft black brown sandy CLAY/SILT. Sand is fine to medium. (Driller notes slag fallen in from strata above).
7.00m to 11.30m	Sand	Medium dense grey brown clayey SAND. Sand is fine to medium
11.30m to 12.80m	Clay	Firm (faintly fissured) brown slightly sandy slightly gravelly CLAY. Sand is fine to medium. Gravel is fine to medium angular and includes sandstone, mudstone and coal.
12.80m to 15.10m	Clay	Firm to stiff faintly laminated/fissured sandy slightly gravelly CLAY. Sand is fine to medium. Gravel is fine to medium subangular and includes sandstone, mudstone and coal.
15.10m to 15.80m	Clay	Stiff to hard red brown slightly sandy slightly gravelly CLAY. Sand is fine to medium. Gravel is fine to medium subangular and includes sandstone, mudstone and coal.
15.80m to 16.80m	Mudstone	Extremely weak grey MUDSTONE highly weathered.

Ground Conditions

In addition, the borehole log “BH-2002” (located in the Study Site’s south-western sector) recorded the following strata:

Depth bgl (m)	Strata	Description
0.00m to 0.10m	Made Ground	(Light grey gravelly sand. Sand is fine to coarse. Gravel is fine to coarse angular and includes slag and ironstone. Slag is grey vesicular. Slag content is 0-25%).
0.10m to 8.70m	Sand	Loose to medium dense grey silty SAND with interbeds of dark grey sandy silt and fragments of shell.
8.70m to 14.70m	Clay	Firm brown red slightly sandy gravelly CLAY. Gravel is fine to coarse and includes sandstone and limestone.

STAGE TWO – REVIEW OF HISTORICAL DATASETS

Sources of Information Consulted

The following information sources have been employed in order to establish the nature and scope of the UXO threat:

1. *6 Alpha's Azimuth Database*;
2. *Home Office WWII Bomb Census Maps*;
3. *WWII and post-WWII aerial photography*;
4. *Official Abandoned Bomb Register*;
5. *Information gathered from the National Archives at Kew*;
6. *Historic UXO information provided by 33 Engineer Regiment (Explosive Ordnance Disposal) at Carver Barracks, Wimbish.*

Potential Sources of UXO Contamination - Overview

In general, there are several activities that might have contaminated a site with UXO, but the three most common ways are: legacy munitions from military training/exercises; deliberate or accidental dumping (AXO) and ordnance resulting from war fighting activities (also known as the Explosive Remnants of War (ERW)).

During WWII, the *Luftwaffe* undertook bombing campaigns all over the *UK* and although the *Luftwaffe* had designated primary bombing targets across the *UK*, their high-altitude night bombing was not accurate. There was also a period of indiscriminate bombing of civilian and industrial areas alike in *British* cities in an attempt to cripple the morale of the *British* people. As a result, thousands of buildings were damaged across industrial and residential areas and civilian fatalities were common. Bombs were also jettisoned over opportunistic targets and more rural locations were also attacked in this manner.

As the threat of invasion lingered over *Britain* during WWII, defensive actions were undertaken. The *British* and *Allied Forces* requisitioned large areas of land for military training and bomb storage (including HE bombs, naval shells, artillery and tank projectiles, explosives, LSA and SAA). Thousands of tonnes of these munitions were used for the *Allied Forces* weapon testing and military training alone. It has been estimated that at least 20 per cent of the *UK's* land has been used for military training at some point.

The most common type of UXO discovered today in the *UK* is the aerially delivered high explosive (HE) bomb, which are comparatively thick-skinned and were dropped from *Luftwaffe* aircraft. If the bomb did not detonate when it was dropped, the force of impact enabled the UXO to penetrate the ground, often leaving behind it a UXB entry hole. These entry holes were not always apparent, and some went unreported, leaving the bomb buried and unrecorded. *British* AXO/LSA/SAA is also commonly encountered in areas that were formerly occupied by military forces (such as RAF airfields, military camps and/or military training areas). More rarely, additional forms of *German* UXO are occasionally discovered including *inter alia* Incendiary Bombs (IBs), and Anti-personnel (AP) bomblets and fragments of V1 and V2 rockets.

"The best practice guide for dealing with your UXO risks on land" (CIRIA publication C681) suggests that approximately 10 per cent of all munitions deployed during WWII failed to function as designed. ERW are therefore, still commonly encountered, especially whilst undertaking construction and civil engineering groundwork.

Furthermore, in exceptional circumstances, UXO is discovered unexpectedly and without apparent rational explanation. There are several ways this might occur:

- When *Luftwaffe* aircraft wished to swiftly escape e.g., from an aerial attack, they would jettison some or all of their bombs and flee. This is commonly referred to as *tip and run* and it has resulted in bombs being found in unexpected locations;
- Transportation of aggregate containing munitions to an area that was previously free of UXO, usually related to construction activities employing material dredged from a contaminated offshore borrow site;
- *British* decoy sites were also constructed to deliberately cause incorrect targeting. For obvious reasons, such sites were often built in remote and uninhabited areas – few historical records concerning these sites are available.

WWII Bombing of Teesside

Teesside, so named after the *River Tees* that runs through the heart of the area, was considered a highly important industrial area even before the mass mobilisation of *Britain's* industry at the outset of WWI and WWII. It encompassed *Middlesbrough*, *Billingham*, *Redcar* and other important manufacturing hubs. Much of the local industry was repurposed for the war effort, and so it became one of the major industrial areas to be targeted by the *Luftwaffe* in their attempts to cripple the *British* war effort.

The first bombs landed on *Middlesbrough* and the surrounding areas on the 25th May 1940 when a *Luftwaffe* bomber targeted the *South Steel Plant*. Further bombing occurred across much of the area, with the town of *Redcar* attacked on numerous occasions. In total, over 200 buildings had been destroyed by the bombing of the *Middlesbrough* area by the end of the war.

WWII HE Bomb Density (Figure 4)

The Study Site was located within *Guisborough* and *Eston Urban Districts*, *Redcar Municipal Borough* and *Middlesbrough County Borough*, which recorded two, six, three and four HE bomb strikes per 100 hectares, all “very low” levels of bombing.

WWII Luftwaffe Bombing Targets (Figure 5)

Prior to WWII, the *Luftwaffe* conducted numerous aerial photographic reconnaissance missions over *Britain*, recording key military, industrial and commercial targets for attack, in the event of war. In addition, logistics infrastructure and public services, such as railways, canals, power stations, reservoirs, water and gas works were also considered viable bombing targets.

Luftwaffe aerial reconnaissance photography associated with the Study Site identified *Cleveland Iron Works*, *Redcar Iron Works*, *River Tees Dockyard*, *Tar Distillation Chemical Works* and *South Bank Station* – all of which were located on-site – as primary bombing targets.

WWII HE Bomb Strikes

During WWII, ARP wardens compiled detailed logs of bomb strikes across their respective districts. ARP records associated with the Study Site were not available. Nonetheless, further research of historical records noted evidence of significant bombing across large areas of the Site and in close proximity to it. In the north of the Site, the *Redcar Iron Works*, the *Bran Sands Bombing Decoy* and *Warrenby Marshes* were both bombed during WWII, with the iron works bombed on multiple occasions. In the centre of the Site, HE bombs were dropped in the fields near *West Coatham Grange* and on the marshes near *Lackenby* – both of which likely resulted from poor bombing accuracy rather than deliberate targeting. In the south of the Site, multiple bombs were dropped on the *Southbank (Cleveland) Steel Works*.

In addition to IBs and HE bomb strikes, during the latter part of the war when aerial bombing had significantly declined, the main threat came from V type weapons. V1 and V2 rockets were thin-skinned, unmanned and inaccurate weapons. Despite this, there is no evidence to suggest that the Study Site (or its immediate vicinity) was subjected to rockets strikes during WWII.

The potential penetration depth of an UXB was dependent on a number of factors including but not restricted to those prior to striking the ground e.g. velocity and orientation of the UXB which in turn will be influenced on factors such as the release altitude from the aircraft and encounters with infrastructure during its fall; those encountered at the point of impact i.e. was the impact on concrete, grass, water etc. and finally, the below ground level conditions which were encountered such as infrastructure e.g. services, basements, foundations, and geology e.g. made ground, clay, sand, etc. Further, as the UXB penetrated the ground, it's velocity naturally slowed where, it either came to an abrupt stop e.g., against foundations or would continue for 10's of feet along a route of least resistance which often resulted in a curving of the trajectory back towards the surface. This is known as the “J Curve” effect and often resulted in a considerable horizontal off-set from the point of entry. This is often the reason why UXBs have been discovered against or under the foundations of buildings, which were present during WWII, or many meters from the point of impact.

WWII Bomb Damage

Official bomb damage mapping associated with the Study Site was not available. Nonetheless, an analysis of post-war mapping identified numerous “Ruins” across the Study Site, the majority of which are highly likely to be indicative of bomb damage, given the extensive bombing in the area. Further research of historical records also identified bomb damage at the *Redcar Iron Works* (located on-site) and more generally around *Southbank* and *Grangetown* which is unsurprising given the aforementioned concentration of bombing in those areas.

Bomb damage was also documented in the wider area: on *Tod Point Road* (located immediately to the north of the north-eastern sector of the Site), on *Coatham Road* (approximately 435m to the north-east) and *Aire Street* (630m to the south-west of the south-eastern sector). Bomb craters were also recorded in *Locke Park* (30m east at its closest point) and at *Southbank Football Ground* (approximately 330m to the south-east).

Abandoned Bombs (Figure 6)

An examination of the official abandoned bomb records has identified the following abandoned bombs on-site/potentially on-site:

- Two abandoned 50kg incendiary bombs situated on *Warrenby Marshes*;
- One abandoned 50kg incendiary bomb situated on the *Foreshore, West of Redcar Works*;
- One abandoned bomb of an unknown size situated at *Grangetown, near Middlesbrough*.

Records of WWII UXB Disposal Tasks

Civil defence records did not identify any UXB disposal tasks within *Guisborough and Eston Urban Districts, Redcar Municipal Borough and Middlesbrough County Borough* from 1940-45 within 1,000m of the Study Site. However, it is known that these records are incomplete, some having been destroyed by Luftwaffe action during WWII.

Nonetheless, further research of historical records identified numerous UXB encounters during WWII within the Study Site. Specifically, one UXB was removed from the blacksmith’s shop within the *Redcar Iron Works*, one was removed from close to, or possibly on, the railway between *Grangetown* and *Redcar* and an unspecified number were encountered and removed near *Bessemer Street* (located in the southern sector of the Site).

Military Activity (Figure 7)

There is evidence to suggest that areas of the Site have been used previously for a variety of military purposes. For example, the area of the Site was seen as a potential amphibious invasion landing point in the early stages of WWII and so a number of defensive fortifications were built on-site to defend against such a possibility. Most of these fortifications were located in the northern sector of the Site and consisted of AAA gun batteries and infantry positions such as “pillboxes”. However, 23 anti-invasion minefields comprising primarily mainly of *Mk II, Mk IV and Mk V B Type C Mines*, were also emplaced within the Site adjacent to the coastline. These minefields were a part of a larger anti-invasion minefield-belt, which was deployed along a 20km front from *Hartlepool* to *Saltburn-by-Sea*. There is evidence to suggest that these minefields were cleared after WWII (as was then, common practice), although an analysis of official *EOD* records neither corroborated such clearance nor provided evidence of the success rate of such clearance operations and so it is possible (though highly unlikely) that some may remain shallow buried.

In addition, to defend against aerial attacks, *Bran Sands Bombing Decoy* (designation *C2b*) was built in the north-western sector of the Site. It functioned as a series of controlled fires, which would be lit to simulate an urban area on fire, and also as a series of lights which were built to resemble a marshalling yard and furnace. This was done in an effort to trick *Luftwaffe* bombers into deploying their bombloads over the decoy area, instead of their real target. Further research indicates this decoy was bombed multiple times, and thus was at least partially successful in its aim.

Aside from defensive installations, two historic firing ranges were also documented extending on-site: these were *A.9 Pasley*, a *British Army* coast artillery range, and *N.6 South Gare*, a *Royal Naval* AAA range. It is likely the coastal and beach defence batteries located on-site were associated with this training activity.

The area was also involved in the production of munitions during WWII, with further research indicating that the *Southbank Steel Works* was potentially involved in the manufacture of artillery shells. Additionally, a *Royal Naval* depot located in *Teesport* (in the central sector of the Site) operated as a submarine base during WWI, with the submarines based there involved in numerous wartime activities, including minelaying.

WWII Site Use

The CS mapping prior to WWII (1938) shows that the Study Site was located within a densely developed and industrialised urban area during WWII. The Study Site itself consisted of numerous structures - mainly located in the southern and northern sectors - with large areas of undeveloped ground also present around the central sector.

Therefore, it is likely that footfall within the Site would have varied, with high levels of footfall expected in all developed areas of the Site. Consequently, in those areas of high footfall it is considered more likely that a local civilian, employee or any military personnel based at the Site would have observed and reported any UXB entry holes during WWII, which would have been dealt with at the time. Notwithstanding the high levels of footfall, in any areas that were damaged by bombing during WWII, it is plausible bomb damage debris may have masked a UXB entry hole and caused it to go unnoticed. In all undeveloped areas of the Site there is a higher likelihood that any UXBs impacting within the Site would have done so unnoticed due to the generally lower level of expected footfall.

Due to a combination of the above factors, there is a significant proportion of the Site where it is possible that a UXB entry hole may have been missed, or not observed in the first place.

Post-WWII UXO Encounters

The Client has provided 6 Alpha with the following details of confirmed and/or suspected UXO encounters at the Site since WWII, which were dealt with by EOD Catterick:

- The removal of a “legacy artillery projectile” (potentially containing explosives), found in a scrap sorting area at *Lackenby* on the 26th April 2021;
- The removal of a “suspected device” found at the *Gas Booster House, Lackenby (British Steel’s Footprint)* on the 11th May 2021;
- The removal of a “dud shell” (noted to be approximately 8” and 2’ long) found at a “*scrape pile waiting to be loaded onto a ship on stocking ground at rear of RBT Wharf Offices (their footprint)*” on the 15th May 2021 (subsequently documented as non-explosive. It is considered likely to be an inert training munition);
- The removal and controlled detonation of a “suspected device” found at the *South Bank Area*, near the *Freeport Entrance*, on the 13th July 2021 (subsequently documented as non-explosive);
- The removal and controlled detonation of a “large device” (400mm x 200mm) found near *Torpedo Ladle Repair Shop footprint, Cleveland Praire* on the 24th February 2022;
- The Client has also provided 6 Alpha with the borehole record “S2-BHA5” (located at the *Former SSI Steelworks, Redcar*) which indicates that a borehole was terminated at 11m bgl due to a possible UXO anomaly on the 23rd October 2017.

In addition, further research has also identified the following post-WWII BDO tasks on-site/in close proximity to the Study Site:

- The removal of one anti-tank mine close to the mouth of *River Tees* on the 20th February 1994;
- The removal of an unknown number of inert training artillery projectiles found on *Dockside Road*, near *Old’s Smith’s Dock* on the 21st August 2012;
- The controlled demolition of one projectile at *South Gare, Redcar* on the 25th June 2016;
- The controlled demolition of one *Royal Air Force (RAF)* flash-flare, found by a member of the public, at *Redcar Beach* (located approximately 720m to the north-east) on the 5th June 2016.

Sources of UXO Contamination

Given the historic military activity documented at the Study Site, the most likely source of UXO contamination is *German* aerially delivered ordnance, which ranges from small IBs through to large HE bombs (the latter forms the principal threat), *British* AXO/LSA/SAA and AAA projectiles (which were used to defend the UK against *German* bombing raids) associated with the military activity on-site.

Post-WWII Study Site Development

Generally, the probability of encountering UXO in ground that has been disturbed since it may have been contaminated with UXO is considered to be remote (up to the depth below ground level previously disturbed by any intrusive works). Therefore, an understanding of the Study Site's previous development history is crucial when assessing the likelihood that UXO might be encountered at the Study Site.

Study Site Development History

From an analysis of the CS and OS historical mapping associated with the Study Site, the following history can be deduced:

Year	Analysis
1893-1897 CS Map	The Study Site was located in a developing industrial area. The Study Site consisted mostly of large areas of undeveloped ground in the northern and central sectors, although the southern sector was heavily developed with railway lines and numerous structures.
1913 CS Map	Additional large structures had been built near <i>Cleveland Steel Works</i> in the south-western sector of the Site.
1927-1930 CS Map	<i>Redcar Iron & Steel Works</i> and railway lines had been built in the northern and north-eastern sector. <i>Teesport</i> was built in the central sector.
1938 CS Map	Changes were not recorded at the Study Site.
1953-1955 OS Map	Several structures near the <i>Redcar Iron & Steel Works</i> were demolished.
1970-1974 OS Map	Extensive construction activity occurred across the central and southern sectors, with the development of numerous large industrial structures as part of the <i>Teesside Works</i> , <i>Lackenby</i> and <i>Teesport Refinery</i> , along with the construction of <i>Tees Dock</i> and associated structures. Additional structures were built in the north-western sector near <i>South Gare Breakwater</i> .
1980-1985 OS Map	The <i>Redcar Iron & Steel Works</i> was demolished, and structures associated with <i>Teesside Works</i> had been built in its place. Additional structures were built as part of <i>Teesport Refinery</i> . <i>Cleveland Steel Works</i> was partially demolished, and additional structures built in the central sector and south-western sector near <i>Puddlers Road</i> as part of <i>Teesside Works</i> .
1990-1992 OS Map	Several structures associated with <i>Teesport Refinery</i> were demolished, as were several structures in the south-western sector.
2001-2002 OS Map	A <i>Sewage Works</i> was built in the northern sector near <i>Teesside Works</i> , <i>Redcar</i> , and several structures that were part of <i>Teesside Works</i> , <i>Redcar</i> were demolished. Additional structures were demolished in the southern sector near <i>Eston Road</i> .
2010 OS Map	Several structures near <i>Tees Dock</i> were demolished, and a structure built near <i>Dabholm Road</i> near <i>Tees Dock</i> .
2014-2020 OS Map	Several structures near <i>Tees Dock Road</i> in the southern sector was demolished, and a large structure labelled a <i>Port</i> had been built near <i>Dabholm Road</i> . Several additional structures that were part of <i>Teesside Works</i> , had been demolished

The Study Site history assessment is our best interpretation of the data available at the time of writing. Given that yearly revisions of neither CS and OS mapping, nor aerial photography, are available for analysis, there are gaps between the mapping revisions.

Consequently, it should not be assumed that any new structures and/or features that are labelled on a map revision were constructed, developed, installed or demolished in the exact year that the mapping illustrates the change. It is possible – and indeed likely – that the exact date of development occurred somewhere between the two closest mapping revisions. Specifically, this may be particularly relevant where there is a gap between pre and post-WWII mapping, as it may not be clear whether structures were present during WWII or if they were constructed in the post-WWII period.

STAGE THREE – DATA ANALYSIS

Variable	Result	Comment
Was the area considered to be a primary bombing target during WWII?	✓	Five primary bombing targets were identified on-site.
Was the Study Site or the immediate area bombed during WWII?	✓	Further research identified extensive bombing across large areas of the Study Site.
Did the Study Site or the immediate area experience bomb damage?	✓	Further research identified evidence of significant bomb damage on-site.
Would munitions have been manufactured, stored and/or fired from the Study Site previously?	✓	The Site has been used for various military activities since WWI. Most notably, a number of infantry positions, AAA gun batteries and military training areas have been located on-site.
Was the ground undeveloped during WWII?	✓	The nature of the Site varied significant during WWII. Some areas consisted of numerous structures and railway lines, whilst other large areas consisted of undeveloped ground
Would the footfall have been high in the area?	✗	The level of footfall would have varied depending on the level of development but in all undeveloped areas it is highly likely that footfall would have been generally low.
Would a UXB entry hole have been observed during WWII?	✗	In those areas of lower footfall, and/or those areas of significant bomb damage, it is plausible that a UXB entry hole could have gone unnoticed.
Has UXO been encountered previously at the Study Site?	✓	Numerous UXO encounters have been recorded on-site since WWII, with the most recent was discovered in February 2022.
Have previous intrusive works removed the potential for UXO to be present?	✗	The Study Site has been subjected to varying levels of redevelopment; therefore, it is likely that any UXO within post-war disturbed and developed ground would potentially have been discovered and removed. The potential for a UXO encounter in areas of undisturbed ground remains extant.
Are proposed intrusive works likely to extend into previously undisturbed ground?	✓	Areas of the Study Site have remained undeveloped since WWII and therefore the proposed works may extend into previously undisturbed ground.
Is there potential for an unplanned encounter with UXO to occur during proposed intrusive works?	✓	Given that large areas of the Study Site were subject to extensive bombing during WWII, combined with the history of significant military activity on-site, it is considered possible for an unplanned encounter with UXO to occur.
Does the probability of a UXO encounter vary across the Study Site?	✓	The probability of encountering UXO within post-war disturbed and developed ground is considered to be remote. However, the probability of a UXO encounter within all previously undisturbed areas of the Study Site is extant.

N.B. The ✓ / ✗ symbology is intended to act only as a succinct visual indicator as to whether the data analysis has returned a positive (i.e., ✓) or negative (✗) answer to each question concerning the potential for UXO contamination at the Study Site.

STAGE FOUR – RISK ASSESSMENT

Threat Items

The most probable UXO threat items are *German* HE bombs, IBs, *British* AXO/LSA/SAA and *British* AAA projectiles. The consequences of initiating *German* HE bombs are generally more severe than initiating AXO/LSA/SAA, IBs or AAA projectiles, and thus they pose the greatest prospective risk to intrusive works.

Bomb Penetration Depth

Considering the ground conditions (highlighted in Stage 1), the average BPD for a 250kg *German* HE bomb is assessed to be approximately 6m bgl, with the maximum BPD considered to be approximately 14m bgl. Although it is possible that the *Luftwaffe* deployed larger bombs in the area, their deployment was infrequent, and to use such larger (or the largest) bombs for BPD calculations are not justifiable on either technical or risk management grounds.

WWII *German* bombs have a greater penetration depth when compared to IBs and AAA projectiles, which are unlikely to be encountered at depths greater than 1m bgl. However, due to the “J Curve” and the potential for structures to impede the penetration into the ground, HE bombs have been discovered at much shallower depths than the average.

AXO/LSA/SAA Burial Depth

If present, AXO/LSA/SAA are generally likely to be encountered only in previously undisturbed ground to depths of ~2.0m below the WWII ground level.

Risk Pathway

Given the types of UXO that might be present on-site, all types of aggressive intrusive engineering activities (i.e., investigative groundworks and construction methodologies) may generate a significant risk pathway. Whilst not all UXO encountered aggressively will initiate upon contact, such a discovery could lead to serious impact on the project especially in terms of critical injury to personnel, damage to equipment and project delay.

Prospective Consequences

Consequences of UXO initiation include:

1. Fatally injure personnel;
2. Severe damage to plant and equipment;
3. Deliver blast and fragmentation damage to nearby buildings;
4. Rupture and damage underground utilities/services.

Consequences of UXO discovery include:

1. Delay to the project and blight;
2. Disruption to local community/infrastructure;
3. The expenditure of additional risk mitigation resources and EOD clearance;
4. Incurring additional time and cost.

UXO RISK CALCULATION

Site Activities

Although there is some variation in the probability of encountering and initiating items of UXO when conducting different types of intrusive activities, a number of ground intrusive methodologies have been described for analysis at this Study Site. The consequences of initiating UXO vary greatly, depending upon, *inter alia* the mass of HE in the UXO and how aggressively it might be encountered. For this reason, *6 Alpha* has conducted separate risk rating calculations for each intrusive methodology that might be employed.

Risk Rating Calculation

6 Alpha's Semi-Quantitative Risk Assessment assesses and rates the risks posed by the most probable threat items when conducting a number of different activities on the site. UXO risk is determined by calculating the probability of encountering and initiating UXO and the consequences of an inadvertent UXO detonation.

UXO Risk Zoning

Given the nature and juxtaposition of the identified prospective UXO threat sources in relation to the Site, the likelihood of encountering UXO during planned intrusive operations is considered to be variable across the Study Site. Therefore, it has been possible to zone the UXO risk at the initial strategic level and the Study Site been categorised into areas of HIGH and MEDIUM risk zones.

Site-Specific UXO Risk Zones (*Figure 8 AND 8b*)

VERY HIGH

The VERY HIGH risk zones are located in a 50m radius around the abandoned WWII bombs

HIGH

The HIGH risk zone encompasses the remainder of the Site

Implementation of Risk Mitigation in UXO Risk Zones

The UXO risk mitigation strategy has been refined to reflect the varying level of UXO risk across the Study Site and consequently, the recommended risk mitigation measures will be specific to the level of assessed UXO risk in each zone. The UXO risk mitigation strategy is outlined and presented at Stage 5.

Semi-Quantitative Risk Assessment

A Semi-Quantitative Risk Assessment has been performed and has been categorised separately for the HIGH and MEDIUM risk zones of the Site - the results are presented below.

UXO Risk Calculation Table – VERY HIGH Risk Zone

Activity	UXO Threat Items	Probability (SH+EM=P)	Consequence (D+PSR=C)	UXO Risk (Px C=R)
Trial Pits (25m bgl)	HE Bombs	3+2=5	3+3=6	5x6=30
	AAA Projectiles	2+2=4	3+1=4	4x4=16
	IBs	2+2=4	3+1=4	4x4=16
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Window Sampling	HE Bombs	3+3=6	3+2=5	6x5=30
	AAA Projectiles	2+3=5	3+1=4	5x4=20
	IBs	2+3=5	3+1=4	5x4=20
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Boreholes (25m bgl)	HE Bombs	3+3=6	3+2=5	6x5=30
	AAA Projectiles	2+3=5	3+1=4	5x4=20
	IBs	2+3=5	3+1=4	5x4=20
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Excavations	HE Bombs	3+2=5	3+3=6	5x6=30
	AAA Projectiles	2+2=4	3+1=4	4x4=16
	IBs	2+2=4	3+1=4	4x4=16
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Trenching	HE Bombs	3+2=5	3+3=6	5x6=30
	AAA Projectiles	2+2=4	3+1=4	4x4=16
	IBs	2+2=4	3+1=4	4x4=16
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Piling	HE Bombs	3+3=6	3+2=5	5x5=30
	AAA Projectiles	2+3=5	3+1=4	5x4=20
	IBs	2+3=5	3+1=4	5x4=20
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20

Abbreviations – Site History (SH), Engineering Methodology (EM), Probability (P), Depth (D), Consequence (C), Proximity to Sensitive Receptors (PSR) and Risk Rating (RR).

UXO Risk Calculation Table – HIGH Risk Zone

Activity	UXO Threat Items	Probability (SH+EM=P)	Consequence (D+PSR=C)	UXO Risk (Px C=R)
Trial Pits (25m bgl)	HE Bombs	2+2=4	3+3=6	4x6=24
	AAA Projectiles	2+2=4	3+1=4	4x4=16
	IBs	2+2=4	3+1=4	4x4=16
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Window Sampling	HE Bombs	2+3=5	3+2=5	5x5=25
	AAA Projectiles	2+3=5	3+1=4	5x4=20
	IBs	2+3=5	3+1=4	5x4=20
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Boreholes (25m bgl)	HE Bombs	2+3=5	3+2=5	5x5=25
	AAA Projectiles	2+3=5	3+1=4	5x4=20
	IBs	2+3=5	3+1=4	5x4=20
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Excavations	HE Bombs	2+2=4	3+3=6	4x6=24
	AAA Projectiles	2+2=4	3+1=4	4x4=16
	IBs	2+2=4	3+1=4	4x4=16
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Trenching	HE Bombs	2+2=4	3+3=6	4x6=24
	AAA Projectiles	2+2=4	3+1=4	4x4=16
	IBs	2+2=4	3+1=4	4x4=16
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20
Piling	HE Bombs	2+3=5	3+2=5	4x5=25
	AAA Projectiles	2+3=5	3+1=4	5x4=20
	IBs	2+3=5	3+1=4	5x4=20
	AXO/LSA/SAA	2+2=4	3+2=5	4x5=20

STAGE FIVE – RECOMMENDED RISK MITIGATION MEASURES

Do the ground conditions support a geophysical UXO survey?

Non-Intrusive Methods of Mitigation – Magnetometer results may be affected by ferro-magnetic contamination due to previous construction activities and made ground within the Study Site.

Intrusive Methods of Mitigation – Intrusive magnetometry may be effective on this Study Site, prior to boreholing and piling especially. However, any ferrous metal/red brick contamination in made ground/old foundations may affect the detection capability of the UXB survey equipment, as it passes through the contaminated layer especially. Nonetheless, beyond the contaminated strata such a survey should prove effective.

Mitigation Measures to Reduce Risk to 'ALARP'

Activity	Risk Mitigation Measures	Final Risk Rating
All Activities in All Areas	1. Operational UXO Emergency Response Plan; appropriate site management documentation should be held on-site to guide and plan for the actions which should be undertaken in the event of a suspected or real UXO discovery (this plan can be supplied by 6 Alpha); 2. UXO Safety & Awareness Briefings; the briefings are essential when there is a possibility of explosive ordnance encounter and are a vital part of the general safety requirement. All personnel working on the site should receive a briefing on the identification of a UXB, what actions they should take to keep people and equipment away from such a hazard and to alert site management. Information concerning the nature of the UXB threat should be held in the site office and displayed for general information on notice boards, both for reference and as a reminder for ground workers. The safety awareness briefing is an essential part of the <i>Health & Safety Plan</i> for the site and helps to evidence conformity with the principles laid down in the <i>CDM regulations 2015</i> (this brief can be delivered directly, or in some cases remotely, by 6 Alpha).	ALARP
Trial Pits, Excavations and Trenching into Previously Undisturbed Ground	3. Non-intrusive UXO Survey and/or EOD Engineer in the Watching Brief Role; Where "open" intrusive works into previously undisturbed ground are proposed and where the extent is considered to be within the capabilities of non-intrusive UXO survey equipment and implementation of this is assessed as likely to prove effective, a non-intrusive geophysical UXO survey should be trialled and, if it proves successful, should be employed to survey site-wide, or in specific areas where "open" intrusive works are to be implemented to identify for signs of sub-surface anomalies which may model as the target UXO in advance of said works. If the survey proves partially or wholly ineffective, an EOD Engineer should be present in the UXO Watching Brief role to monitor ongoing "open" intrusive works to identify any suspicious items that may be UXB or UXO related (this service can be provided by 6 Alpha).	
Window Sampling, Piling and Boreholing into Previously Undisturbed Ground	4. Intrusive UXO Survey; Where 'blind' intrusive works into previously undisturbed ground are proposed, an intrusive UXO survey (employing down-hole magnetometer or MagCone techniques) is strongly recommended. Such a survey should extend to the <i>assessed average bomb penetration depth</i> or to the maximum depth of the works, whichever is encountered first, or until geology is encountered through which it is assessed a UXB would not penetrate, to identify for signs of sub-surface anomalies which may model as the target UXO in advance of said works. (This service can be provided by 6 Alpha).	

This assessment has been conducted partially based on the information provided by the Client, should the proposed works change then 6 Alpha should be re-engaged to refine this risk assessment
